CREATING AN ELEVATION PROFILE IN GOOGLE EARTH
Draw a line across the location you want a profile for.

Click save.
Name the line feature
Right click on the line feature and navigate to “Show Elevation Profile”
Navigate on the cross section to view the corresponding elevation.
Estimating area using Google Earth Pro

Draw a polygon
Click on the “measurements” tab on your polygon properties window and choose units
As long as the Terrain layer is on the corresponding elevation is shown as you navigate through the screen.
