Louisiana ranks high among the states in overall energy consumption. Louisiana remained 4th in total energy consumption in 2012 compared to the previous year. Louisiana is 2nd in per capita energy consumption for 2012. The main reason for Louisiana’s high energy consumption is the extremely energy intensive petrochemical and petroleum refining industry that is located in the state. The abundance of Louisiana’s natural resources has historically meant low energy prices, which have attracted a large cluster of energy intensive industries to the state. Figures 1 & 2 below show Louisiana energy consumption by sector and source. The large amount of energy consumed by the petrochemical and petroleum refining industry is reflected in the high percentage for the industrial sector and the high percentages for natural gas and petroleum.

Table 1 shows where Louisiana ranks among the states in various energy consumption categories and lists the top energy consuming state for each category.

Louisiana is also a large producer of energy, mainly in the form of crude oil and natural gas. Table 2 on the following page presents the Louisiana energy balance for 2012. The energy balance is calculated both inclusive and exclusive of Louisiana’s OCS oil and gas production.

| TOTALS:              |                     |                      |                |               |
| EXCLUDING LOUISIANA OCS | 3,756.9 TBTU | 3,900.2 TBTU | -143.3 TBTU |               |
| INCLUDING LOUISIANA OCS | 7,253.6 TBTU | 3,900.2 TBTU | 3,353.4 TBTU |               |

The Louisiana energy balance for 2012 shows that the state consumed 143.3 more TBTUs of energy than it produced if Louisiana OCS production is not included. If Louisiana OCS production is included, the state is a net producer of energy by 3,353.4 TBTUs.

TCF = Trillion Cubic Feet  
OCS = Outer Continental Shelf (federal waters seaward of the state's 3-mile offshore boundary)  
TBTU = Trillion BTU's  
kWh = Kilowatt hour  
MMBBL = Million Barrels  
MMSTON = Million Short Tons

1. Unless otherwise noted, data is obtained from the Energy Information Administration's latest published figures for state energy consumption.  
2. Includes condensate  
3. Includes gas plant liquids
