

Pressure Data:

3/7/2023 @ 6PM

7B Tubing Press = 79.8 psig

7B Annulus Press = 451.2 psig

7B Brine Injection Rate = 232.6 GPM

6X Tubing Press = 188.7 psig

6X Annulus Press = 191.2 psig

Only daylight oil withdrawal ops from PPG 7B to
PPG 20 (as needed).

Oil Injection into PPG 20:

- 3/7 = 0 bbls

- Total = 6,596 bbls

3/8/2023 @ 4AM

7B Tubing Press = 86.2 psig

Downhole Pressure in 7B Tubing = 1437.00 psig

7B Annulus Press = 450.9 psig

7B Brine Injection Rate = 233.0 GPM

6X Tubing Press = 188.6 psig

6X Annulus Press = 190.9 psig

Site Observations:

-#20 sheen will be sampled on Thursday by ERM. Observers described the sheen as a yellow sheen in report from day shift (possibly pollen?)

-#7 wellhead has a brine leak at the top threaded connection where the downhole gauge was installed. Attempts at tightening the connection were unsuccessful, Lonquist will be on site next week to pull gauge and perform a sonar survey. Post survey, Lonquist will fix leaking connection.

Operational Notes:

-Transporters for Buckhead midstream will be on site to haul 6,000 of #7b oil that has been stored temporarily in #20.

-Braided discharge hose will be changed on rental pump, small brine leak observed.

-Injection hoses from #22 to #7 will be changed from current o-ring type to flange-gasket type to prevent brine leaks.

Date: 3-7-23
