

**SNT Satellite Update**  
**InSAR Subsidence**  
March 8, 2024

Lonquist comment:

Regarding the SNT satellite, we were notified by TREA that the March 8<sup>th</sup> orbit did not have a Sulphur acquisition scheduled, and no image was captured. The following acquisition on March 20<sup>th</sup> does appear to be scheduled. Below is the notification that was received from TREA on 3/6/2024:

I'm emailing to provide you an update for the upcoming Sentinel-1A image acquisitions and InSAR data over Sulphur Mine. In our most recent check of ESA's acquisition plan for the 04 March - 24 March period, the March 8th image over Sulphur Mines is not included (impacting the 2024-03-10 InSAR data update). However, at this time, the March 20th image does appear to be in the planned acquisitions.
