- Top of Caprock Control Wells (Subsea)
- Top of Caprock Contours (Subsea, CI = 100')
- Existing Cavern Extent Outlines (17)
- Section Boundary [LGS-2002]

Caveat: Contours were created using both well control and 3D seismic interpretation compiled by Christopher Thompson, P.G. (License No. 41118) from the Association of Professional Engineers and Geoscientists of Alberta (APEGA).

Note: Caprock pick values preceded by "m" were deemed inaccurate due to a well deviation that was not surveyed, and was thus ignored for contouring purposes.
