Subject: Water Well Survey Results
Compliance Order No. IMD 2022-027
Westlake US 2, LLC
Sulphur Mines Salt Dome
Calcasieu Parish, Louisiana

Dear Mr. Lee:

Environmental Resources Management Southwest, Inc. (ERM), on behalf of Westlake US 2, LLC (Westlake), is pleased to provide the results of the water well survey conducted within one mile of the Sulphur Mines salt dome. This survey was conducted in response to the January 19, 2023 Louisiana Department of Natural Resources (LDNR) Office of Conservation's First Supplement to Compliance Order No. IMD 2022-027.

1. SITE SETTING

The Sulphur Mines salt dome is located approximately 2 miles northwest of the City of Sulphur, Louisiana (Figure 1). Economic production of minerals (sulfur, oil and gas, and brine) from within and surrounding the salt dome has been occurring since the early 1900s and continues presently. For brine production, Westlake currently utilizes groundwater from five industrial water wells installed in the 500-foot sand of the Chicot aquifer. The brine caverns within the salt dome are generally greater than 2,000 feet below ground surface (bgs).

The primary source of municipal drinking water supply in the vicinity of the salt dome is the Chicot aquifer, which is also used for industrial, irrigation, and domestic purposes. According to the USGS (*Water Resources of Calcasieu Parish, Louisiana*, January 2017), in 2015 approximately 86 million gallons per day were pumped from the Chicot aquifer system in Calcasieu Parish, with approximately 25 million gallons per day used for public supply (27% total withdrawal). The City of Sulphur utilizes as many as seven water wells for public supply, all of which are screened in the 500-foot sand of the Chicot Aquifer and located approximately 2.5 miles to the southeast of the Sulphur Mines salt dome (see Figure 1). The Houston River Waterworks District 11 utilizes two water wells installed in the 500-foot sand for public supply which are located approximately 2 miles northeast of the salt dome (see Figure 1). Two industrial wells operated by Boardwalk for brine production are located approximately 1.1 miles south of the Sulphur Mines salt dome.

Per the Louisiana Department of Environmental Quality (LDEQ) Risk Evaluation/ Corrective Action Program (RECAP) groundwater classification guidance, water wells and groundwater usage are to be identified within a one-mile radius of the property boundaries. For this survey, the one-mile radius was drawn around the 1,500-feet deep salt contour. Numerous water wells are registered as active within one mile of the salt dome (Figure 2).

2. MUNICIPAL WATER SUPPLY

Per the Louisiana Department of Health, there are 44 active public water supply systems in Calcasieu Parish including 11 Calcasieu Parish Waterworks Districts that provide potable water to the residents within their district boundaries and service areas (Figure 3). The majority of properties within one mile of the Sulphur Mines salt dome are within the Houston River Waterworks District 11 boundary. A small percentage of the properties within the one-mile radius is serviced by the City of Sulphur Water System.

3. WATER WELL SURVEY

To better understand groundwater usage, ERM conducted a water well survey by contacting property owners within a one-mile radius of the salt dome per RECAP section 2.10 for groundwater/aquifer use classification. Properties selected were wholly or partially within one mile of the 1,500-foot bgs salt contour. The water well survey consisted of a cover letter and survey form mailed to property owners, followed by a visual inspection and face-to-face follow-up visit, as necessary. A copy of the cover letter and survey form is provided in Attachment 1.

3.1 Mailing

In July 2023, ERM mailed a survey to the residents of Sulphur, LA within a one-mile radius of the Sulphur Mines Dome brine facility to determine the presence of private water wells (Figure 4). The properties were identified utilizing publicly-available Calcasieu Parish records and are listed in Table 1. Properties were identified by the Tax Assessment Number. Several individual parcels have the same Assessment Number and were considered as one “property”. Letters were sent to 111 property owners and 17 property residents, representing 139 total unique properties. In cases where the owner address and the property address were different, a letter was sent to both the owner address and the physical property address. Responses to the letter survey were received by for 34 properties (Figure 4).

3.2 Follow-up Property Visit

Following the letter survey, a site visit was conducted to contact property owners/residents who were sent a letter but provided no response. During the visit, the property owner/resident was directly communicated with, if available. If the owner/resident was not available, a follow-up letter was left at the property, and a general visual observation was conducted to identify the presence of a water well and/or evidence of municipal water service. Seventy-two (72) of the properties were visited in person as shown on Figure 4. Thirty-nine (39) properties where no response was received were identified as having no visible infrastructure, mailbox, or access and were not visited (Figure 4). A few individual properties with multiple parcels under the same Assessment Number were also visited.

4. KNOWN WELL SEARCH RESULTS

LDNR records indicate 48 active water wells within a one-mile radius (see Figure 2). Of those 48, seven are listed as active industrial/chemical manufacturing, two as rig supply, two as public supply, one as irrigation, two as domestic, one as unknown/other, 32 as monitoring wells, and one as an abandoned observation well. Efforts were made to locate each of these active 47 wells to verify status and use. The water well search results are illustrated on Figure 5.

Five of the seven registered industrial wells were located in the field (the five industrial wells used by Westlake for brine operations). The remaining two industrial wells (019-104, and 019-103) were not found. A sketched map on the historical well records for 019-102 indicates that these 2 wells were located along an old service road north of where they are plotted on SONRIS (see Figure 5). Multiple attempts were made to locate these wells in both the SONRIS and replotted locations, but they could not be found. The area is heavily overgrown with vegetation and access is difficult. ERM identified no individuals with knowledge of these wells or their use. These wells were not found and are likely plugged and abandoned; however, the status could not be confirmed. Two industrial wells just outside the one-mile radius (019-1483 and 019-1489) are active and are currently operated by Boardwalk.

The two registered oil and gas rig supply wells (019-466 and 019-467) were not located. Based on the historical well records, the locations where these wells were installed appears to be in the central portion of the dome (see Figure 5). ERM identified no individuals with knowledge of these wells, and they are likely plugged and abandoned.

One of the wells listed as commercial public supply (019-1054) was not found. Based on the historical well records, this well appears to have been the public supply well for sanitary facilities in the office, control room, and other support buildings on the dome (formerly owned and operated by PPG). This well appears to have been located southeast of the current Westlake office building but is no longer present (see Figure 5). ERM identified no individuals with knowledge of this well. It is likely that this well is plugged and abandoned. The other well is registered as public supply (019-1261) for the Sulphur Police firing range. ERM was unable to gain access to this property; however, the well is visible on the current and historical aerial imagery, and it is assumed that this well is still active.

The single irrigation well registered within one mile of the salt dome (019-1238) was not located as plotted. Based on the historical well file, this well was installed in Township 9S, Range 7W, Section 22, which is located approximately 3 miles northwest of the town of Iowa. This well appears to be mislocated on the map, based on incorrect coordinates provided on the well registration form.

Two domestic wells are registered as active near the salt dome (019-6559Z and 019-7624Z). Well 019-6559Z was potentially located. A capped pipe with a concrete pad and what appeared to be cut electrical conduit was identified as potentially being the registered well. There was no indication of an actively used water well in the vicinity of the registered well. No owner or resident was present or could be contacted regarding the well. The other well, 019-7624Z, was not located in the field. A resident was contacted at the property with no knowledge of the well. The owner of the well was not available at the time. It is assumed that this well is still active but not used for domestic purposes.

The well listed as unknown/other (019-17636Z) was a previously unregistered well and was referred to as the Cottages well. This well has been included in the groundwater regular groundwater sampling program. According to the records, and verbal communications, this well is installed in the 700-foot sand of the Chicot aquifer. This well supplies water for 8 cottages located approximately 1,000 feet west of the salt dome. The cottages are not continuously occupied; however, per RECAP this well would be classified as a public water supply well, serving more than 6 households.

Efforts were made to locate the shallow monitoring wells located on and near the salt dome. Historical records indicate that there were 21 monitoring wells installed on and near the dome during the investigation work conducted by Meridian Oil in the early 1990s. Two were listed as plugged and abandoned (019-8293Z and 019-8298Z), and no registration records were found for MW-4. Many of these wells were located, but there were several that could not be found. Some have been damaged or plugged. The single abandoned observation well (019-102) was not located, as the area was heavily vegetated and difficult to access. Based on the sketched map on the historical well records this well appears to be installed north of the coordinates listed in SONRIS (see Figure 5). Monitoring wells installed along the pipeline right-of-way east of the salt dome are still present. The status of the monitoring wells is shown on Figure 5.

5. PROPERTY SURVEY RESULTS

The results of this survey yielded a current total of 55 responses. Of the 141 properties, only five properties were identified as having unregistered wells not previously known.

The parcel numbers and street addresses of these properties are as follows:

- 01163787 (1830 W. Burton St.) – not in use, located 60 ft behind the house.
- 01163922 (1831 W. Burton St.) – not in use, located back near a pond. City water meter also observed.
- 01234544 (1541 W. Burton St.) – unable to verify location or use. A resident was spoken to, but the property owner having knowledge of the well was unavailable. According to the historical records, well 019-7624Z is located in the immediate vicinity of this property and could be the well on the property. The location of the well on the property was not known, and ERM was unable to verify if the well was 019-7624Z or another well.
- 01353480A (1545 N. Claiborne St.) – domestic well actively used. One well is already registered on the property (019-13434Z); however, a different well was identified during the survey. Both wells are outside the one-mile radius.
- 01234528 (450 Kim St.) – plugged & abandoned (not shown on Figure 5) and unable to verify if this well had been registered previously.

6. CONCLUSIONS

The majority of the properties utilize municipal water, primarily from Houston River Waterworks District 11, as confirmed verbally by residents or after a brief visual inspection of the property. The known water wells present within a one-mile radius of the salt dome are shown on Figure 6. Only two known water wells (019-176363Z, and 019-1261) within one-mile of the salt dome are used for public water supply. There is still uncertainty about the presence and potential use of water well 019-7624Z and the well at 1541 W. Burton St.

If new information becomes available, these survey findings will be revised and resubmitted. Should you need additional information or wish to discuss, please contact Scott Himes at scott.himes@erm.com or (832) 209-8811.

Yours sincerely,

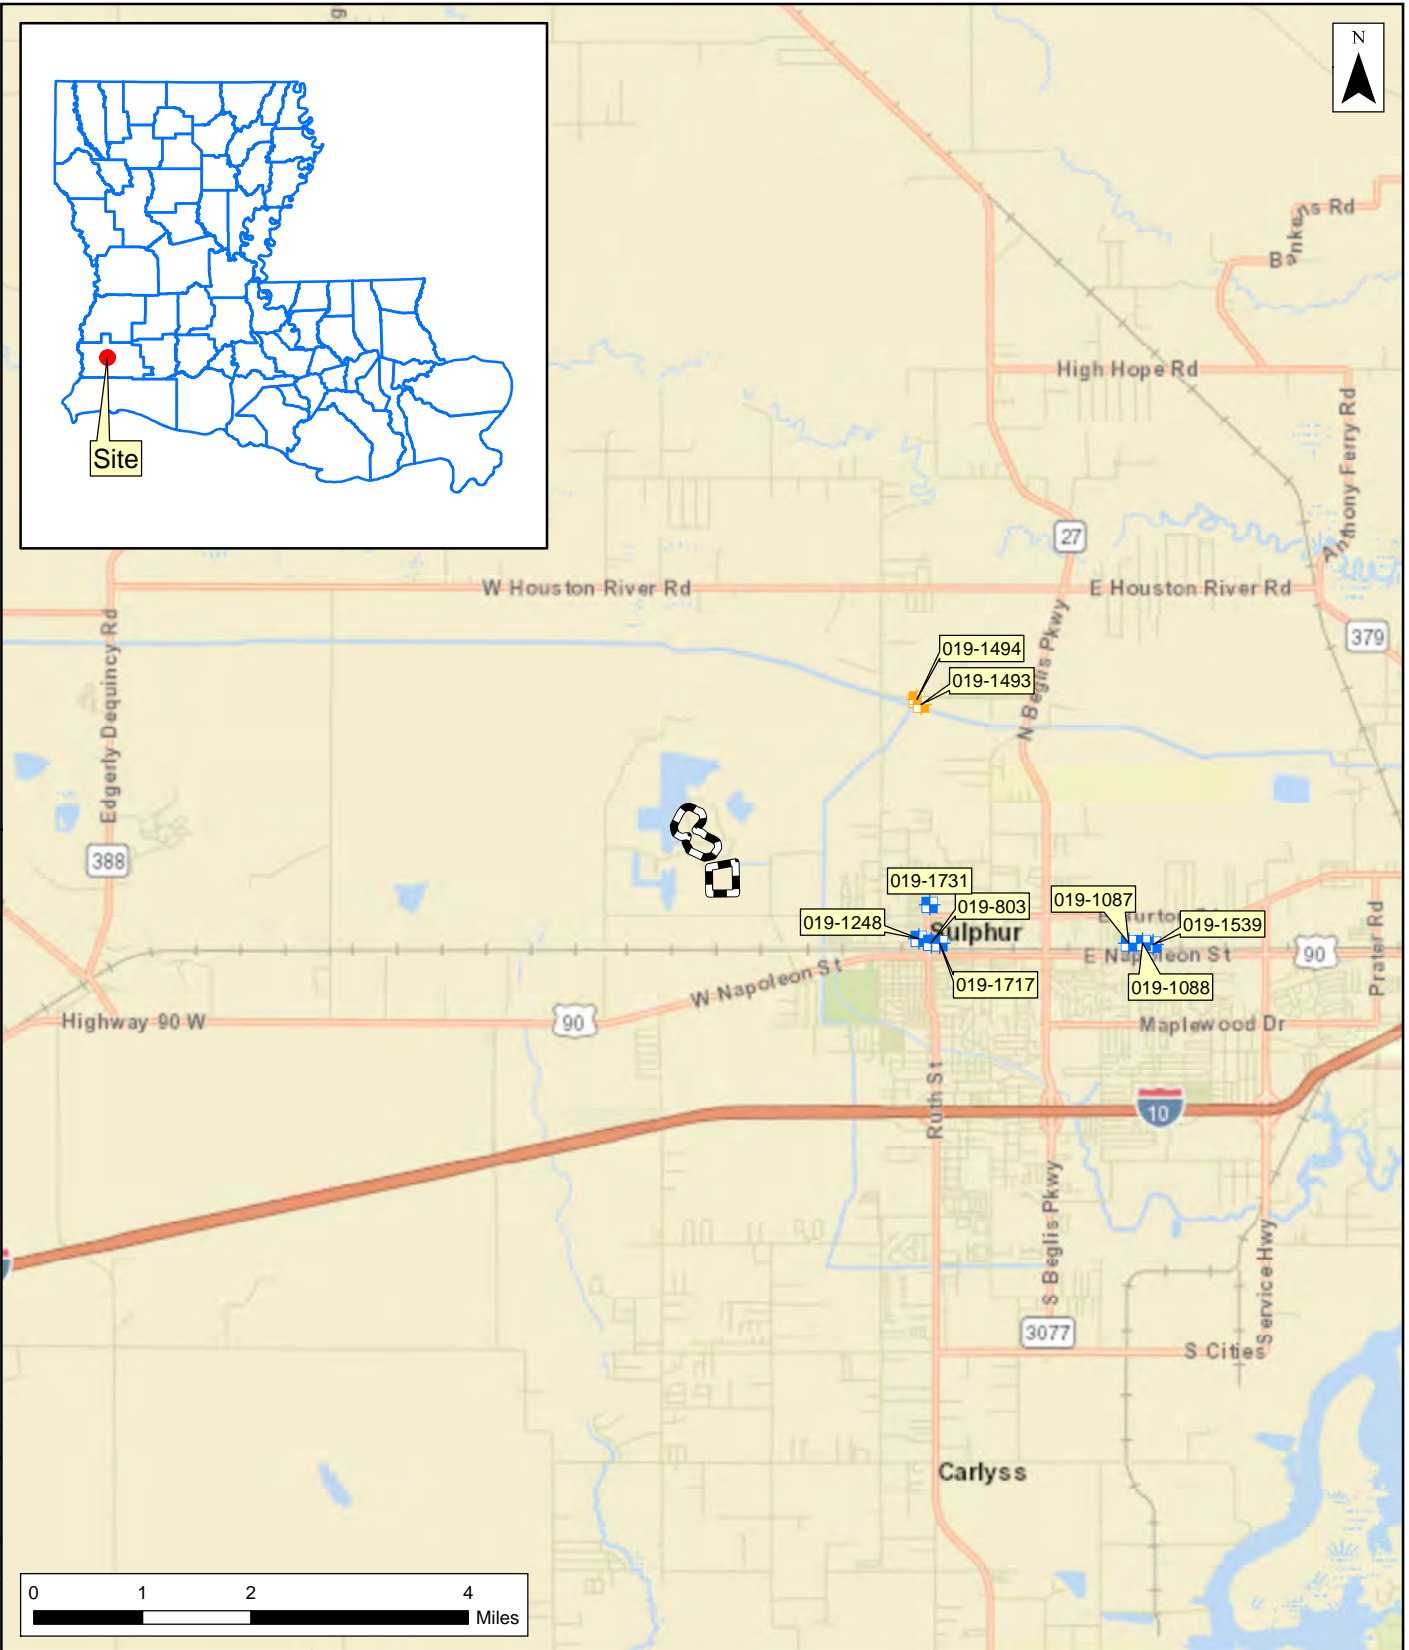

Scott A Himes, P.G.

Subject: **Water-Well Survey**

Dear Property Owner/Resident,

As part of an ongoing groundwater study, Environmental Resources Management (ERM) a private environmental consulting firm, is conducting a water well survey in the area of Sulphur Louisiana in cooperation with the Louisiana Department of Natural Resources (LDNR). The properties are included as part of this survey (see attached map(s)):

Property Address 1 (Assessment No. XXXXXXXXX)

Property Address 2 (Assessment No. XXXXXXXXX)

This survey is to identify water wells that may be present on the properties either currently or historically. No additional information is required for the water wells that are shown on the attached map. Please take a few minutes of your time to complete the attached survey and return it to ERM using the enclosed self-addressed, stamped envelope, or scan the QR code provided to complete the survey online. If applicable, ERM may contact you about collecting a water sample at no cost to you.

Please feel free to contact me at (832) 209-8811 or at SulphurWWsurvey@erm.com with any questions or comments. I appreciate your time and consideration.

Yours sincerely,

DRAFT
