APPENDIX F – DISPOSAL WELL APPLICATIONS

Submission of disposal well application, Form UIC-2 COM SWD, Form UIC-2 SFI COM, or Form UIC-43; if applicable (Section 519.C.6)

Disposal Well Applications

- Form UIC-2 COM SWD for the Brickyard Trucking SWD No. 001, New Well, is included in this section.
- Form UIC-2 COM SWD for the Brickyard Trucking SWD No. 002, New Well, is included in this section.
- Form UIC-2 COM SWD for the Brickyard Trucking SWD No. 003, New Well, is included in this section.

Strike and dip geologic cross-sections at a minimum of a two mile radius (Section 519.C.6)

- Strike and dip geologic cross-sections at a minimum of a two-mile radius included in this section.

Please Note: Appendix F is being submitted to the Injection and Mining Division on September 19, 2024.

Re: Application No. 45567, 45568, and 45569 / Class II Commercial SWD Wells
Brickyard Trucking SWD Well No. 001, No. 002, and No. 003
Jamestown Field, Bienville Parish

Dear Mr. Wooten:

This Office has completed the technical review of the referenced applications and deemed them to be administratively complete. You must provide the Office of Conservation/Environmental Division one original and one copy of the documentation as approved by the Injection & Mining Division and as required in Section F of the Office of Conservation/Environmental Division document, *Commercial Facility & Transfer Station Permit Application Checklist.* Please include a copy of this letter with that submittal.

Please be advised, injection will only be permitted in distinct intervals exhibiting sufficient porosity and permeability to support radial flow of injected fluids as demonstrated by the open-hole logs.

Should you have any questions concerning this matter, please contact the Injection and Mining Division at (225) 342-5515 between the hours of 8:00 a.m. and 4:30 p.m., Monday through Friday.

Sincerely,

Steven M. Giambrone

RE: Brickyard Trucking, LLC (B1119)
Commercial SWD Applications (UIC-2-COM SWD) - New Drill
Brickyard Trucking SWD Nos. 001, 002, and 003
Jamestown Field (4738) / Bienville Parish, Louisiana

Dear Mr. Lee:

Raines & Associates, LLC, on behalf of Brickyard Trucking, LLC, has enclosed an Original and one (1) copy of Commercial Saltwater Disposal Applications (UIC-2-COM SWD), for each of proposed wells, Brickyard Trucking SWD Nos. 001, 002, and 003 (Appendix F). All required fees, public notices and attachments are included. This submittal is made in a separate binder that includes the three (3) well applications and the associated Cross Sections. A separate submittal will be made to the Environmental Division of the Office of Conservation which includes the remainder of Appendices.

Thank you for your assistance in processing these applications. If you need any additional information, please feel free to contact me at (318) 218-7945 or by email at bobbyrainesjr@gmail.com.

Sincerely,

Robert B. Raines, Jr. PG (LA PG 433)

PAGE 529 OF 699 PAGES

COMMERCIAL SALTWATER DISPOSAL WELL PERMIT
APPLICATION PROCEDURES FOR
FORM UIC-2 COM SWD

PERMITTING PROCESS

- Upon receipt of the original submittal, an Initial Application Review letter will be sent out by the Injection and Mining Division (IMD) noting missing or incorrect information.

- Additional revisions to the application may be requested as the application progresses through the technical review process. Please include the 'Application No.' assigned by IMD on the upper right corner of each page of the revisions. The 'Application No.' can be found on your receipt letter, which you should receive within two weeks of receipt of your Application by IMD.

- The permitting process is a two-step procedure:

1st Step: After the Application is reviewed and found to be complete and to meet the requirements of Statewide Order 29-B, an "Approval to Construct" letter will be issued. This will allow the well to be drilled and completed or to be converted as described in the Application, but **NOT TO INJECT**. A list describing the "Reporting Requirements" will be included with the "Approval to Construct" letter. The "Reporting Requirements" will tell you what you need to file with the Injection & Mining Division (IMD) after completion of the well and before issuance of the final well PERMIT TO INJECT.

2nd Step: The Well History, mechanical integrity test results (witnessed by a IMD inspector), and logs are reviewed. If found adequate, a final "Permit" letter to inject fluids will be issued. If not adequate, the IMD will tell you what remedial action, if any, can be taken to obtain a "PERMIT TO INJECT".

PUBLIC NOTICE

- **For a proposed COM SWD WELL at a NEW FACILITY:**

  Refer to LAC 43:XIX.519.B for public notice guidance for proposed Commercial SWD Wells at a New Commercial Facility.

- **For a proposed COM SWD WELL at an EXISTING FACILITY:**

  Refer to LAC 43:XIX.529.B for public notice guidance for proposed Commercial SWD Wells at an Existing Commercial Facility.

APPLICATION GUIDELINES

- These procedures are intended to provide applicants with a checklist to ensure all information is provided. Depending on the given well, additional items may be required.

- This list applies to new wells to be drilled and those to be converted, re-drilled or re-permitted for injection.

- Supporting documentation is required in the form of attachments. Label each of the attachments by number in the lower right-hand corner; example: "Attachment 2A".

- Any Orders pertaining to the permitting of this well should also be attached.

- Items 30 through 33 of the Form UIC-2 COM SWD Application should be certified with an original signature from an associate of the operating company. The associate may be an officer; manager; general partner; proprietor; operator of the well, field or facility; or any direct employee of the operating company employed in a decision-making role. This Division will not accept a signature from an agent or consultant of the operating company to certify the application.

- If the surface casing is not set 100 feet below the base of the Underground Source of Drinking Water (USDW), please contact a Geologist with this Division for guidelines pertaining to surface casing variances.

SUBMIT THE APPLICATION IN THE FOLLOWING ORDER:

- **Application for Permit or to Amend Permit to Drill for Minerals**
  - **For a NEW DRILL or RE-DRILL**, two copies of completed form MD-10-R (Yellow Card)
  - **For a CONVERSION or RE-PERMIT**, two copies of completed form MD-10-R-A (Pink Card)
  - Both cards must have original signatures. The information provided must match items 3 to 11 on the Form UIC-2 COM SWD Application.

- **Filing Fee**

  Check made payable to "Office of Conservation". Please refer to LAC 43:XIX.Chapter 7 for the current fee schedule or contact the IMD at (225) 342-5515.

- **Nonrefundable Hearing Fee**
  - **For a NEW DRILL or CONVERSION at a NEW FACILITY,** make check payable to "Office of Conservation". Please refer to LAC 43:XIX.Chapter 7 for the current fee schedule or contact the IMD at (225) 342-5515.
  - **For a NEW DRILL or CONVERSION at an EXISTING FACILITY,** not applicable unless a hearing is requested, and is subsequently approved by the Commissioner of Conservation.

- **APPLICATION** – Commercial Saltwater Disposal Well Permit Application
  - Form UIC-2 COM SWD with an original signature from an officer with the operating company authorized to certify the application.
  - All items must be answered or noted "N/A"--not applicable.

- **ATTACHMENT 1** -- Location Plat
  - **For a NEW DRILL, RE-DRILL, or RE-PERMIT**, include an original certified drilling location plat, labeled "Attachment 1." This plat may be combined with Attachment 2, as long as it is a certified plat. The IMD requires that the Location Plat contains geographic coordinates in GCS- Latitude, Longitude (NAD27 and NAD 83) and State Plane- X,Y (Lambert, NAD27 and NAD83) for the proposed COM SWD well. The location plat must reflect, at a minimum, a Class D Survey as defined by the Professional and Occupational Standards for Professional Engineers and Land Surveyors in LAC 46:LXI.2905.A.4. A Class D Survey requires a degree of accuracy to the nearest foot.
  - **For a CONVERSION**, include the drilling location plat, labeled "Attachment 1." It may be a photocopy if the correct State Plane- X,Y (Lambert, NAD27) coordinates are available in the DNR database (SONRIS). If State Plane- X,Y coordinates are missing or are incorrect in SONRIS, an original certified location plat must be submitted. This plat may be combined with Attachment 2 and must meet the same requirements as those defined for a new drill, re-drilled, or re-permitted wells.

- **ATTACHMENT 2** -- Area of Review

  2A. Area of Review (AOR) Map (Attachment 2A)

  The AOR map must identify, within a one-quarter-mile (1320-ft.) radius of the proposed injection well, the locations for the following:

  - The proposed injection well
  - All producing wells
  - All injection wells
  - All shut-in wells
  - All plugged and abandoned wells

- All dry holes
- All source water wells (for enhanced recovery)
- All freshwater wells
- Include a legend to identify each well and to otherwise clarify the AOR map. Except for freshwater wells, only information on file with the Office of Conservation and pertinent information known to the applicant is required to be included on this map.

2B. AOR Well List (Attachment 2B)

The AOR Well List must identify all wells in the AOR except for the freshwater wells. A diligent search must be attempted to locate all wells within the AOR of the proposed injection well. The search must include:

- Conducting a foot-search of the AOR to identify any wells in the field;
- Searching SONRIS for wells in the DNR database; **AND**
- Researching field maps and company files.

The search should identify the following types of wells: all producing wells, all injection wells, all shut-in wells, all plugged and abandoned wells, all dry holes, and all source water wells (for enhanced recovery).

Applicants must complete the Area of Review Well List that is included in this application package. IMD will not accept printouts of the SONRIS database search in lieu of the Area of Review List. If no wells are found within the AOR, then type "No Wells Found" on "Attachment 2B".

2C. Freshwater Well List (Attachment 2C)

The Freshwater Well List must identify all the freshwater wells within the AOR. A diligent search must be attempted to locate all freshwater wells within the AOR of the proposed injection well. The search must include:

- Conducting a foot-search of the AOR to identify any freshwater wells in the field;
- Searching the Department of Transportation and Development's (DOTD) database of Registered Water Wells in the state of Louisiana (http://www.dotd.state.la.us/intermodal/wells/disclaimer.asp). A printout of the DOTD database search must be include with the application package; **AND**
- Researching company files for Rig Supply wells.

Applicants must complete the Freshwater Well List that is included in the Form UIC-2 SWD Application package. IMD will not accept printouts of the DOTD database search in lieu of the Freshwater Well List. All wells listed on the Freshwater Well List must be plotted on the Area of Review Map and/or the Location Plat.

2D. Include a printout of the DOTD database search of the AOR and label the list "Attachment 2D."

2E. Laboratory Analyses (Attachment 2E)

Include a laboratory analysis of a water sample from EACH freshwater well listed on "Attachment 2C." Identify each sample using the DOTD Well ID of the well that was sampled. If the well is not registered with the DOTD database, identify the sample using the well name that used to identify the well on the Freshwater Well List (Attachment 2C). The laboratory analysis must be a **signed original** from a LDEQ LELAP accredited laboratory. A PDF list of Accredited Laboratories can be found on the LDEQ website, http://www.deq.louisiana.gov, under ***Divisions >> Laboratory Services >> Laboratory Accreditation***. The analysis sheet(s) must identify the freshwater well sampled, and, at a minimum, include measurement of:

- Chloride (mg/l)
- Total Dissolved Solids (mg/l)

Provide an explanation if samples are not obtainable.

INJECTION AND MINING DIVISION

- **ATTACHMENT 3** -- Facility Diagram

The diagram should be to scale (or reasonably close) and labeled, "Attachment 3." A surface facility diagram that shows the following, where applicable:

- Proposed well
- Storage tanks
- Containment levees
- Flow lines entering and leaving the facility
- Filters
- Treatment system/equipment
- Other Class II wells
- Access roads
- Buildings
- Unloading areas
- Barges
- Containers (including design capacities)
- All other equipment and operational features of the storage, treatment and/or disposal system

- **ATTACHMENT 4** -- Well Schematic Diagram

For a NEW DRILL, two attachments are required:

- A schematic diagram of the proposed well, labeled "Attachment 4A".
- A work prognosis describing the sequence of work to be performed, labeled "Attachment 4B".

For a CONVERSION, RE-DRILL, or RE-PERMIT, three attachments are required:

- A schematic diagram of the well as it currently exists (before conversion to injection), labeled "Attachment 4A".
- A schematic diagram of the well as it is proposed to be completed, labeled "Attachment 4B".
- A work prognosis describing the sequence of work to be performed, labeled "Attachment 4C".

If a cement bond log (CBL) has been run prior to submission of the application, please submit a copy with the application.

The schematic diagram(s) must match items 13 to 22 on the Form UIC-2 COM SWD Application and show the following:

Surface equipment:

- Well head
- Pressure gauges
- Flow line diameters at wellhead
- Monitoring equipment, if used

Subsurface equipment:

- All casing strings:
  - Diameter
  - Weight (per foot)
  - Depth set (top and bottom).

  Surface casing must extend at least 100 feet below the USDW.

PAGE 533 OF 699 PAGES

OFFICE OF CONSERVATION
SEP 19 2024
INJECTION AND MINING DIVISION

- Hole (drill bit) diameters
- Cement specifications:
  - Type of class
  - Number of sacks
  - Tops of cement (indicate whether calculated, logged, or to be logged)
- Proposed cement squeeze(s), if any:
  - Type or class
  - Number of sacks
  - Calculated top of cement (to be logged)
- Injection tubing:
  - Diameter
  - Type or material
  - Depth
- Packer:
  - Type
  - Depth

    The packer must be set at or below the cement in the wellbore that is bonded to the first isolation shale formation immediately above the top of the proposed injection zone. But in no case, should the packer be set higher than 150 feet above the top of the proposed injection zone. Proof of isolation (bonded cement) must be provided by a cement bond log (CBL).
- Proposed injection zone (see notes for Attachment 7):
  - Top
  - Bottom
- Proposed initial perforated, open-hole, or screened interval:
  - Top
  - Bottom
- Depths:
  - Total Depth
  - Drilled-out depth (where applicable)
  - Plugged-back depth (where applicable)

OFFICE OF CONSERVATION

SEP 19 2024

INJECTION AND MINING DIVISION

- **ATTACHMENT 5** -- Injection Fluid Analysis

A laboratory analysis of a representative sample of the fluid to be injected in the proposed well, labeled "Attachment 5". The laboratory analysis must be a **signed original** from a LDEQ LELAP accredited laboratory. A PDF list of Accredited Laboratories can be found on the LDEQ website, http://www.deq.louisiana.gov, under Divisions>>Laboratory Services>>Laboratory Accreditation.

The analysis sheet must indicate the source of the sample and IMD should be able to track the sample to the fluid source wells. At a minimum, the analysis should include measurement of:

- Chloride (mg/l)
- Specific gravity or density (g/cc or ppg)
- Total Dissolved Solids (mg/l)
- Temperature of sample when specific gravity was measured

- **ATTACHMENT 6** – MASIP Calculation Request

The Maximum Surface Injection Pressure (MASIP) can be calculated **based on the fracture gradient of the injection formation**, or **based on the fracture gradient of the confining formation**. Applicants must request how the MASIP should be calculated for the proposed well. Please refer to Attachment 6- MASIP Calculation Request (included in this application package) for additional information regarding each calculation's requirements. Complete, sign, and submit the request, with any other necessary information, as Attachment 6 of the Form UIC-2 SWD Application.

- **ATTACHMENT 7** -- Electric Logs

For a NEW DRILL, please include electric logs (e-log) of the closest well to the proposed well location which show the proposed injection zone and USDW. E-logs of more than one well may be included, if necessary, to show both the lowermost USDW and proposed injection zone. A diligent search must be made to locate at least one e-log within one mile of the proposed well. If an e-log can not be located within one mile, a search may be extended up to two miles. If an e-log is not available, use a sheet of paper labeled, "Attachment 7" which states, "No e-logs are available from wells within a two-mile radius of the proposed well location".

For a CONVERSION, RE-DRILL, or RE-PERMIT, please include a duplicate of the original e-log or a photocopy of the e-log from the well proposed for conversion. If the lowermost USDW was not logged, please include an e-log from a well within a one-mile radius that shows the lowermost USDW.

Please apply the guidelines below and mark the following information on the e-logs:

- ***The Serial Number of the Well***

  Mark with e-log with the serial number of the well, and ensure that the complete e-log, from the header to the bottom logged interval, is submitted. The 5-inch/100-ft-scale portion is not necessary.

- ***The Base of the Lowermost Underground Source of Drinking Water (USDW)***

  Conduct a one-mile search from the proposed well location to locate the closest well with an e-log that shows the lowermost USDW. The USDW can be determined from the deep induction curve, generally the dotted curve, on the e-log. Resistivity changes with temperature and depth, therefore the guidelines below are used to approximate the lowermost USDW in sands at the following depths:

  - **Ground surface to 1,000 feet: 3 ohms or higher is considered USDW;**
  - **1,000 feet to 2,000 feet: 2 ½ ohms or higher is considered USDW; and**
  - **2,000 feet and deeper: 2 ohms or higher is considered USDW.**

  Clay or shale intervals with resistivities higher than these are not considered USDW's. Please provide an e-log from the search area that shows there is at least 100 feet of net shale between the top of the proposed injection zone and the base of the USDW.

- ***The Top and Bottom of the Proposed Injection Zone***
  - An injection zone consisting of multiple sands may be permitted, provided that the USDW and sands capable of hydrocarbon production are isolated. Permitting a zone of multiple sand units will allow for future perforations within the permitted injection zone by applying for a work permit (Form UIC-17).
  - Cement isolation confining the top of the proposed injection zone must be confirmed by a Cement Bond Log (CBL). The CBL must show cement in the wellbore bonded to the first isolating shale formation immediately above the approved injection zone.
  - The packer must be set at or below the cement isolation confining the top of the proposed injection zone, but no more than 150 feet above the top of zone.
  - Conduct a one-mile search from the proposed well location to locate productive wells. Ensure that there is at least 100 feet of net shale between the proposed injection zone and any productive intervals.

- ***The Proposed Perforated Interval***

- **ATTACHMENT 8** -- Geologic Cross Sections

  Provide strike and dip geologic cross sections in the north-south and east-west directions, which intersect at the location of the proposed injection well. These cross sections must include, at a minimum:

  - Available log control: label the serial number, well name, and well number of each e-log
  - Geologic units
  - Lithology from the surface to the lower confining bed below the proposed injection zone
  - Local geology in at least a two-mile radius from the proposed injection well
  - Base of the Underground Sources of Drinking Water
  - Vertical and Lateral limits of the proposed injection zone (reservoir)
  - Vertical and Lateral limits of the upper and lower confining beds
  - Location of faults or other geologic structures
  - Vertical and horizontal scales

- **ATTACHMENT 9** – Commercial Saltwater Disposal Well Closure Plan and Cost Estimate

  Provide a closure plan for plugging and abandoning the proposed well and a cost estimate to implement the closure plan.

- **ATTACHMENT 10** -- Public Notice

  An original copy of proof of publication of each legal notice. Please check for accuracy of serial number; well name and number; section, township, and range; etc. If these are not correct, the publication will not be acceptable. You will be billed by each journal for the publication.

  Complete the legal notice attachment and send the notice to:

  - The state journal: ***The Advocate*, Legal Ad Department, P.O. Box 588, Baton Rouge, LA 70821, (225) 388-0128.**
  - The parish journal. Contact the Louisiana Secretary of State-Publication Division for a list of the parish journals at **(225) 922-0309** or view the list on-line at http://www.sos.louisiana.gov/pubs/pubs-opj.htm.
  - The journal of general circulation.

  The journal will send you a notarized "Proof of Publication", which is to be labeled, "Attachment 10", and included as part of the Application. If the Proof of Publication is not received when the Application is sent to the IMD, it may be sent later provided you also write the Application No. on the Public Notice. The "Application No." can be found on your receipt letter, which you should receive within two weeks after your Application reaches the IMD.

- **ATTACHMENT 11** -- Well History and Work Resume Report

  - **For a CONVERSION or RE-PERMIT**, a photocopy of each Well History and Work Resume Report (Form WH-1) that have previously been filed with the Office of Conservation.
  - **For a RE-DRILL**, a photocopy of the previously filed WH-1 that documents the plugging and abandonment of the well.
  - **For a NEW DRILL**, there is no Attachment 11.

OFFICE OF CONSERVATION

WORK PROGNOSIS

1. Notify Louisiana Department of Natural Resources prior to spud and 24 hours prior to cementing all casing strings.

2. Install location sign - make sure sign is in compliance with Louisiana Department of Energy and Natural Resources regulations and denotes the well to be an SWD.

3. Move in rig and equipment and rig up.

4. RIH with 13 1/2 in. bit drilling to 1200 ft. Circulate and condition hole. R/U Wireline and run Open Hole/Triple Combo Log (GR/SP/RES) from TD to Surface.

5. Run 10 3/4 in. surface casing, 40.5 lbs/ft. to 1200 ft. and cement to surface with 295 sacks Lite (Yld 1.98 cu.ft./Sack, (100% excess)) and 265 sacks of Class A (Yld 1.19 cu.ft./Sack (100% excess)). WOC 12 hrs. Pressure test casing to a minimum of 1000 psi with not more than 5% loss in pressure in a 30-minute time period to determine casing integrity. Complete and sign Form CSG-T, submit originals upon completion of well (IMD requires the original).

6. Install and Test BOP according to Injection and Mining regulations; LAC 43:XIX.111.A & LAC 43:XIX.111.C.

7. RIH with 8 3/4 in. bit drilling to 6900 ft. Circulate and condition hole. R/U Wireline and run open hole w/triple combo log (GR/SP/RES) from TD through Surface Casing Shoe. Shoot Percussion Sidewall Cores in Proposed Injection Intervals.

8. Run 7 in. longstring casing, 26 lbs/ft. to 6900 ft. and cement to surface with 400 sacks 60:40 Lite cement (Yld 1.95 cu.ft./Sack) and 830 sacks Premium Class H cement (Yld 1.14 cu.ft./Sack (35% excess)). 100' cement in 7" casing, 60 sacks of Class A cement (Yld 1.19 cu.ft./Sack), PBTD-6800'. WOC 12 hrs. Pressure test casing to a minimum of 1000 psi with not more than 5% loss in pressure in a 30-minute time period to determine casing integrity. Complete and sign Form CSG-T, submit originals upon completion of well (IMD requires the original).

9. Run CBL/VDL/GR from total depth to surface casing. Evaluate cement bond log for possible squeezes. The log must show a minimum of 11 continuous feet of not less than 60% bonded cement (less than 7.5 millivolts) set across from the first isolating shale immediately above the top of the proposed injection zone and must show evidence of cement below the bottom of the injection zone. The CBL will be submitted to Injection and Mining, Engineering Department prior to perforating and setting the packer in the well to verify adequate cement isolation. If no

additional cementing work is required, proceed with constructing the well. If additional cement work is required, perforate and squeeze as required by Injection and Mining Division and re-run the cement bond log after the squeeze. Submit the CBL to the Injection and Mining Division for approval before completing the well.

10. With approval from IMD, R/U Wireline & perforate injection interval from 6480' – 6490', with 4 spf. After perforating; Contact appropriate CES Agent to schedule the fluid level measurement for purposes of calculating the formation pressure. Take a measurement of the reservoir pressure of the injection zone. This pressure can be obtained by direct measurement from a downhole pressure gauge or by taking a static fluid level reading in the well and calculating the pressure at the perforations. This is reported on the UIC-WH1 and is now required in order to receive a permit to inject.

11. Pick up Baker Model AD1 packer and go in hole with 4 1/2" tubing & set packer on tension at 6363'. The packer must be set at a depth that is equal to or deeper than the cement in the wellbore that is bonded to the first isolating shale immediately above the approved injection zone. (No higher than 150' above TOZ)

12. Contact appropriate CES Agent to schedule the Mechanical Integrity Pressure Test (MIPT) and fluid level measurement for purposes of calculating the formation pressure. Pressure test tubing/casing annulus to 400 psi for 30 minutes. A Conservation Enforcement Specialist must be present to witness the test.

13. Submit all required paperwork within 20 days of completing the well as stated in the "Permit to Construct" and wait on "Permit to Inject" approval from IMD before injection and disposal of any fluids.

14. Monitor injection pressure and volumes to stay within the guidelines of the permit

Louisiana Office of Conservation – Injection & Mining Division: Cement Bond Logging Guidelines:

1. Gamma-ray curve 2. Casing collar locator 3. Travel Time on the 3-foot receiver 4. 0-100 mv Amplitude Curve	5. X5 or X10 Amplified Amplitude Curve (Important) 6. Variable Density Log (VDL) or Waveform (for pipe within a pipe. 7. A free pipe section 8. The most recent shop calibration & date.

MASIP CALCULATION REQUEST

(Check the box next to the appropriate request and complete the requested information.)

☑ The applicant requests to calculate the Maximum Authorized Surface Injection Pressure (MASIP) **based on the fracture gradient of the injection formation**. As described in Intra-Office Policy Statement No. IMD 1999-03, the MASIP will be calculated not to exceed 90% of the calculated fracture pressure of the injection zone based on Eaton's Correlation of 9 ppg formation fluid. The following information has been provided:

- The specific gravity of the injection fluid is 1.10, as reported in Attachment 6 - Fluid Source Analyses.
- The top of the proposed perforations is 6480 feet, as given in Item No. 21 of the Form UIC-2 SWD application.
- An area of review of **one-quarter (¼) mile** (1,320 feet) has been conducted and all of the wells located within the radius have been identified in Attachment 2B. Each well in the AOR will be evaluated for deficiencies. If deficiencies exist, the well(s) will be properly plugged and abandoned or remediated using another approved corrective action to protect the USDW.

The signature provided at the bottom of this page certifies the applicant understands this requirement.

☐ The applicant requests to calculate the MASIP **based on the fracture gradient of the confining formation**. As described in Intra-Office Policy Statement No. IMD-GS-09, the MASIP will be calculated by limiting the pressure at the depth of injection to 75% the pressure needed to fracture the confining formation. The following information has been provided:

- The specific gravity of the injection fluid is, _____, as reported in the fluid source analyses (Attachment 6).
- The top of the proposed perforations, _____ feet, as given in Item No. 21 of the Form UIC-2 SWD application.
- The geomechanical data of the confining zone above the proposed injection zone ☐ has been or ☐ will be derived from one of the following methods:

OFFICE OF CONSERVATION

  - ☐ Subsurface acquisition and testing of the confining beds,
  - ☐ Wireline logging to generate mechanical properties,

SEP 19 2024

  - ☐ Leak-off testing of the confining beds using fluid with timed velocity, or
  - ☐ Other acceptable procedure: _____

INJECTION AND MINING DIVISION

  The results of the proposed procedure ☐ have been submitted as Attachment 7A, or ☑ will be submitted prior to issuance of a permit to inject for the proposed well.
- An area of review of **one-half (½) mile** (2,640 feet) has been conducted and all of the wells located within the radius have been identified in Attachment 2B. Each well in the AOR will be evaluated for deficiencies. If deficiencies exist, the well(s) will be properly plugged and abandoned or remediated using another approved corrective action to protect the USDW.
- The proposed top of the injection zone is approximately _____ feet from the base of the USDW. If the difference between the top of the proposed injection zone and the base of the USDW is less than 1,000 feet, then the MASIP will be based on a surface pressure gradient not to exceed 0.25 psi/ft, calculated with respect to the top of the proposed perforations or the top of the open-hole completion.
- The surface casing is set at least 100 feet below the base of the USDW.
- A groundwater monitoring plan has been submitted as Attachment 7B and includes all of the following provisions:
  - Installation of a monitoring well or wells that is screened or perforated at the base of the USDW.
  - Collection of fluid from the monitoring well or wells, which will be sampled by a third party and analyzed by a LDEQ, LELAP accredited laboratory on a quarterly basis for:
    - Chlorides
    - Total dissolved solids
    - BTEX
    - Specific gravity
    - Temperature
    - pH
  - Collection of a fluid level in the monitoring well or wells on a monthly basis.
  - Submission of a quarterly report, which includes all laboratory analytical data and fluid level measurements. The report will be submitted to the Injection and Mining Division within 30 days of the end of the quarter in which the sampling and measurements were performed. It is understood that failure to file reports or delinquent filings will result in enforcement actions.

The signature provided below certifies the applicant understands this requirement.

APPENDIX N – CLOSURE FUNDING

Closure plan and cost estimate {Section 519.C.14.(a)}

Brickyard Trucking, LLC will maintain a Surety Bond to be on file with the Office of Conservation to provide for adequate closure of the Brickyard Trucking, LLC Commercial SWD Wells and Facility.

Following is a description of the closure plan, cost estimate, and verification that these documents were provided by an independent professional consultant.

Draft documentation of closure funding {Section 519.C.14.(b)}

Following the closure plan, cost estimate, and verification is draft documentation of closure funding

INJECTION AND MINING DIVISION

BRICKYARD TRUCKING, LLC
BRICKYARD TRUCKING SWD NO. 001, NEW WELL
BIENVILLE PARISH, LOUISIANA

Plugging and Abandoning Procedure – Brickyard Trucking SWD NO. 001

1. Complete Form UIC-17 Injection Well Work Permit to Plug and Abandon (P & A) the Brickyard Trucking SWD No. 001, with attachments and fee, and submit to the Injection and Mining Division for approval.

2. Once Work Permit is approved, Contact Conservation Enforcement Specialist (CES) agent to witness plugging and abandoning procedure.

3. Move in workover rig and rig up. Install and Test Blowout Preventer (BOP). Record test.

4. Pressure test casing/tubing annulus. Bleed off pressure in both annulus and tubing. Use weighted fluid to kill well, if necessary.

5. Pull wellhead and surface equipment to remove injection string – (4 1/2" tubing). Release tension packer and pull 4 1/2" tubing and packer.

6. Run and set retainer with wireline unit at 6360'. Run 2 7/8 in. tubing and sting into retainer. Break down formation.

7. Squeeze perforations with 200 sacks of Class A cement or until locks up. Spot 200 ft. of cement on top of retainer (6360'-6160') with 40 sacks of Class A cement, 15.6 lb./gallon, yield of 1.18 cu./ft./sack. Wait 12 hours on cement.

8. Go in hole and tag cement. Pressure test to a minimum of 350 psi without more than 5% loss in pressure in a 30 min. period.

9. Pump 10#/gal mud on top of cement plug within wellbore.

10. Spot 600' cement plug from 1300'–700' with 110 sacks of Class A cement (Minimum of 100' inside and outside surface casing) 15.6 lb./gallon, yield of 1.18 cu./ft./sack. Wait 12 hours on cement.

11. Go in hole and tag cement. Pressure test plug to a minimum of 350 psi without more than 5% loss in pressure within a 30 min. period.

12. Pump 10#/gal mud on top of cement plug in wellbore.

13. Spot 100' Class A cement plug from 105' – 5' with 20 sacks of Class A cement, 15.6 lb./gallon, yield of 1.18 cu./ft./sack. Run tremie pipe in surface casing (10 3/4") and long string casing (7") annulus and pump 50 sacks of Class A cement, 15.6 lb./gallon, yield of 1.18 cu./ft./sack down annulus.

14. Cut all casing 5' below ground surface. Weld ½" steel plate on each casing string. Weld serial number and P&A date on top of plate.

15. Cover steel plate with soil and remediate area, remove all equipment, and restore location.

BRICKYARD TRUCKING, LLC
BRICKYARD TRUCKING SWD NO. 002, NEW WELL
BIENVILLE PARISH, LOUISIANA

Plugging and Abandoning Procedure – Brickyard Trucking SWD NO. 002

1. Complete Form UIC-17 Injection Well Work Permit to Plug and Abandon (P & A) the Brickyard Trucking SWD No. 002, with attachments and fee, and submit to the Injection and Mining Division for approval.

2. Once Work Permit is approved, Contact Conservation Enforcement Specialist (CES) agent to witness plugging and abandoning procedure.

3. Move in workover rig and rig up. Install and Test Blowout Preventer (BOP). Record test.

4. Pressure test casing/tubing annulus. Bleed off pressure in both annulus and tubing. Use weighted fluid to kill well, if necessary.

5. Pull wellhead and surface equipment to remove injection string – (4 1/2" tubing). Release tension packer and pull 4 1/2" tubing and packer.

6. Run in hole and set retainer with wireline unit at 5480'. Run 2 7/8 in. tubing and sting into retainer. Break down formation.

7. Squeeze perforations with 200 sacks of Class A cement or until locks up. Spot 200 ft. of cement on top of retainer (5480'-5280') with 40 sacks of Class A cement, 15.6 lb./gallon, yield of 1.18 cu./ft./sack. Wait 12 hours on cement.

8. Go in hole and tag cement. Pressure test to a minimum of 350 psi without more than 5% loss in pressure in a 30 min. period.

9. Pump 10#/gal mud on top of cement plug within wellbore.

10. Spot 600' cement plug from 1300'–700' with 110 sacks of Class A cement (Minimum of 100' inside and outside surface casing) 15.6 lb./gallon, yield of 1.18 cu./ft./sack. Wait 12 hours on cement.

11. Go in hole and tag cement. Pressure test plug to a minimum of 350 psi without more than 5% loss in pressure within a 30 min. period.

OFFICE OF CONSERVATION

12. Pump 10#/gal mud on top of cement plug in wellbore.

SEP 19 2024

13. Spot 100' Class A cement plug from 105' - 5' with 20 sacks of Class A cement, 15.6 lb./gallon, yield of 1.18 cu./ft./sack. Run tremie pipe in surface casing (10 ¾") and long string casing (7") annulus and pump 50 sacks of Class A cement, 15.6 lb./gallon, yield of 1.18 cu./ft./sack down annulus.

INJECTION AND MINING DIVISION

14. Cut all casing strings 5' below ground surface. Weld ½" steel plate on each casing string. Weld serial number and P&A date on top of plate.

15. Cover steel plate with soil and remediate area, remove all equipment, and restore location.

Plugging and Abandoning Procedure – Brickyard Trucking SWD NO. 003

1. Complete Form UIC-17 Injection Well Work Permit to Plug and Abandon (P & A) the Brickyard Trucking SWD No. 003, with attachments and fee, and submit to the Injection and Mining Division for approval.

2. Once Work Permit is approved, Contact Conservation Enforcement Specialist (CES) agent to witness plugging and abandoning procedure.

3. Move in workover rig and rig up. Install and Test Blowout Preventer (BOP). Record test.

4. Pressure test casing/tubing annulus. Bleed off pressure in both annulus and tubing. Use weighted fluid to kill well if necessary.

5. Pull wellhead and surface equipment to remove injection string – (4 1/2" tubing). Release tension packer and pull 4 1/2" tubing and packer.

6. Run in hole and set retainer with wireline unit at 4200'. Run 2 7/8 in. tubing and sting into retainer. Break down formation.

7. Squeeze perforations with 200 sacks of Class A cement or until locks up. Spot 200 ft. of cement on top of retainer (4200'-4000') with 40 sacks of Class A cement, 15.6 lb./gallon, yield of 1.18 cu./ft./sack. Wait 12 hours on cement.

8. Go in hole and tag cement. Pressure test to a minimum of 350 psi without more than 5% loss in pressure in a 30 min. period.

9. Pump 10#/gal mud on top of cement plug within wellbore.

10. Spot 600' cement plug from 1300'–700' with 110 sacks of Class A cement (Minimum of 100' inside and outside surface casing) 15.6 lb./gallon, yield of 1.18 cu./ft./sack. Wait 12 hours on cement.

11. Go in hole and tag cement. Pressure test plug to a minimum of 350 psi without more than 5% loss in pressure within a 30 min. period.

12. Pump 10#/gal mud on top of cement plug in wellbore.

13. Spot 100' Class A cement plug from 105' – 5' with 20 sacks of Class A cement, 15.6 lb./gallon, yield of 1.18 cu./ft./sack. Run tremie pipe in surface casing (10 ¾") and long string casing (7") annulus and pump 50 sacks of Class A cement, 15.6 lb./gallon, yield of 1.18 cu./ft./sack down annulus.

14. Cut all casing strings 5' below ground surface. Weld ½" steel plate on each casing string. Weld serial number and P&A date on top of plate.

15. Cover steel plate with soil and remediate area, remove all equipment, and restore location.

DRAFT IRREVOCABLE LETTER OF CREDIT

Dear Sirs:

We hereby establish our Irrevocable Letter of Credit No. _____ in your favor, at the request and for the account of **Brickyard Trucking, LLC** up to the aggregate amount of (amount) available upon presentation by the Commissioner of Conservation, Office of Conservation, Department of Energy and Natural Resources, State of Louisiana on:

1. your sight draft, bearing reference to this letter of Credit No. _____; and

2. your signed statement reading as follows: "I certify that the amount of the draft is payable pursuant to regulation issued in accordance with the requirements of Louisiana R.S.30:1 et seq."

This letter of credit is effective as of _____, *20__*, and must be renewable on October 1, _20_____, and on each successive expiration date, unless at 120 days before the current expiration date, we notify both you and **Brickyard Trucking, LLC**. Documentation that the required closure bond or letter of credit has been renewed must be received by September 15th of each year, unless at least 120 days before the current expiration date, we notify both you and **Brickyard Trucking, LLC** by certified mail that we have decided not to extend this letter of credit beyond the current expiration date. In the event you are so notified, any unused portion of the credit shall be available upon presentation of your sight draft for 120 days after the date of receipt by both you and **Brickyard Trucking, LLC** as shown on the signed return receipts.

This letter is subject to the Uniform Customs and Practice for Documentary Credits (2007 Revision) fixed by the International Chamber of Commerce Brochure No. 600 ("UCP 600").

We hereby agree with you and negotiating banks or bankers that drafts drawn under and in compliance with the terms of this credit shall be duly honored on due presentation to the drawee.

DRAFT SURETY BOND

FROM: BRICKYARD TRUCKING, LLC
AND
SURETY

TO: OFFICE OF CONSERVATION
DEPARTMENT OF ENERGY AND NATURAL RESOURCES
STATE OF LOUISIANA

THIS SURETY BOND is given by Brickyard Trucking, LLC, principal, and [surety name], Surety, to Office of Conservation, Department of Energy and Natural Resources, State of Louisiana, P.O. Box 94275, 70804 - 9275, pursuant to the following terms and conditions:

Principal and surety are bound to creditor in the sum of $[TBD] Dollars, for the payment of which principal and surety jointly and severally bind themselves, their successors, and assigns.

Principal has applied to Creditor to receive a permit or has in effect a permit issued by Creditor to operate a commercial facility, Site Code TBD, for the receipt, storage, treatment and/or disposal of exploration and production waste in BIENVILLE Parish, Louisiana pursuant to the provisions of LSA-R.S. 30:4(I)(10), and LAC43: XIX. Subpart 1. Chapter 5, Sections 513 and 567. Principal is required to provide bonding to ensure the adequate closure of such facility and this bond is issued for said purpose.

This obligation shall run continuously and shall remain in full force and effect until and unless the bond is canceled as provided herein or as otherwise provided by law.

Surety may cancel the bond only by sending notice of cancellation by certified mail to both Principal and Creditor. Cancellation cannot occur or be effective until 120 days after the date of receipt of notice of cancellation by both Principal and Creditor. Further, such notice of cancellation or cancellation shall not affect this surety bond in respect to any obligation which may have arisen prior thereto.

Surety shall become liable on this bond obligation, if and when Principal fails to perform his obligation to adequately close the facility as determined by Creditor after notice and in accordance with administrative procedures.

Following such determinations, Creditors shall draw on the surety bond by requesting payment by certified mail, and Surety shall pay the amount thereof within 30 days of receipt of said demand. If payment is not made within said 30 days period Surety shall also be liable for legal interest from date of receipt of demand, 10% of principal and interest as attorney's fees and all court cost incurred to collect the obligation.

The amount of the bond liability is as expressed herein, but Principal and Surety take notice of the legal requirements for annual review of the closure bond amounts, which is based upon cost estimates for adequate closure. Following this review Creditor may increase, decrease, or allow the amount to remain the same. Upon notice from Creditor, if an increase is required, Principal shall cause the bond amount to be increased or shall otherwise provide the added security within 60 days after notice.

I WITNESS WHEREOF, the principal and Surety have executed this surety bond at _____ on this _____ day of _____, 20____.

SAID APPLICATION WILL REQUEST APPROVAL FROM THE ENVIRONMENTAL DIVISION TO CONSTRUCT AND OPERATE A COMMERCIAL DEEP WELL INJECTION WASTE DISPOSAL FACILITY FOR DISPOSAL OF EXPLORATION & PRODUCTION WASTE (E & P WASTE) FLUIDS.

THE PROPOSED FACILITY WILL BE LOCATED IN BIENVILLE PARISH, SECTION 17, TOWNSHIP 16 NORTH, RANGE 8 WEST, APPROXIMATELY 2.0 MILES NORTH OF JAMESTOWN, LOUISIANA.

APPLICANT INTENDS TO DISPOSE OF EXPLORATION AND PRODUCTION WASTE FLUIDS GENERATED FROM THE DRILLING AND PRODUCTION OF OIL AND GAS WELLS BY MEANS OF DEEP WELL INJECTION INTO THE SUBSURFACE AFTER INITIAL STORAGE IN TANKS.

RE: **Commercial SWD-New Drill**
Brickyard Trucking, LLC (B1119)
Brickyard Trucking SWD Nos. 001, 002 & 003
Jamestown Field (4738) / Bienville Parish, Louisiana

Dear Sir or Madam:

As per the Louisiana Department of Energy and Natural Resources – Injection & Mining Division requirements for PE and PG Certifications for Class II Commercial Saltwater Disposal Wells, the undersigned Registered Professional Engineer has overseen the preparation of the following engineering documents:

1. Attachment 4A – Proposed Wellbore Schematic for the Brickyard Trucking SWD Nos. 001, 002 & 003
2. Attachment 4B – Proposed Work Prognosis for the Brickyard Trucking SWD 001, 002 & 003
3. Attachment 9 – P&A Wellbore Schematic for the Brickyard Trucking SWD Nos. 001, 002 & 003
4. Attachment N 14 – Closure Funding for the Brickyard Trucking, LLC Facility.

I certify to the best of my knowledge that the calculations used within are reasonable and that the documents are accurate.

Sincerely,

Robert B. Raines, III P.E.
Vice-President

COMMERCIAL SALTWATER DISPOSAL WELL PERMIT APPLICATION PROCEDURES FOR FORM UIC-2 COM SWD

PERMITTING PROCESS

- Upon receipt of the original submittal, an Initial Application Review letter will be sent out by the Injection and Mining Division (IMD) noting missing or incorrect information.
- Additional revisions to the application may be requested as the application progresses through the technical review process. Please include the 'Application No.' assigned by IMD on the upper right corner of each page of the revisions. The 'Application No.' can be found on your receipt letter, which you should receive within two weeks of receipt of your Application by IMD.
- The permitting process is a two-step procedure:

1st Step: After the Application is reviewed and found to be complete and to meet the requirements of Statewide Order 29-B, an "Approval to Construct" letter will be issued. This will allow the well to be drilled and completed or to be converted as described in the Application, but **NOT TO INJECT**. A list describing the "Reporting Requirements" will be included with the "Approval to Construct" letter. The "Reporting Requirements" will tell you what you need to file with the Injection & Mining Division (IMD) after completion of the well and before issuance of the final well PERMIT TO INJECT.

2nd Step: The Well History, mechanical integrity test results (witnessed by a IMD inspector), and logs are reviewed. If found adequate, a final "Permit" letter to inject fluids will be issued. If not adequate, the IMD will tell you what remedial action, if any, can be taken to obtain a "PERMIT TO INJECT".

PUBLIC NOTICE

- **For a proposed COM SWD WELL at a NEW FACILITY:**

  Refer to LAC 43:XIX.519.B for public notice guidance for proposed Commercial SWD Wells at a New Commercial Facility.

- **For a proposed COM SWD WELL at an EXISTING FACILITY:**

  Refer to LAC 43:XIX.529.B for public notice guidance for proposed Commercial SWD Wells at an Existing Commercial Facility.

OFFICE OF CONSERVATION

INJECTION AND MINING DIVISION

APPLICATION GUIDELINES

- These procedures are intended to provide applicants with a checklist to ensure all information is provided. Depending on the given well, additional items may be required.
- This list applies to new wells to be drilled and those to be converted, re-drilled, or re-permitted for injection.
- Supporting documentation is required in the form of attachments. Label each of the attachments by number in the lower right-hand corner; example: "Attachment 2A".
- Any Orders pertaining to the permitting of this well should also be attached.
- Items 30 through 33 of the Form UIC-2 COM SWD Application should be certified with an original signature from an associate of the operating company. The associate may be an officer; manager; general partner; proprietor; operator of the well, field or facility; or any direct employee of the operating company employed in a decision-making role. This Division will not accept a signature from an agent or consultant of the operating company to certify the application.
- If the surface casing is not set 100 feet below the base of the Underground Source of Drinking Water (USDW), please contact a Geologist with this Division for guidelines pertaining to surface casing variances.

SUBMIT THE APPLICATION IN THE FOLLOWING ORDER:

- **Application for Permit or to Amend Permit to Drill for Minerals**
  - **For a NEW DRILL or RE-DRILL**, two copies of completed form MD-10-R (Yellow Card)
  - **For a CONVERSION or RE-PERMIT**, two copies of completed form MD-10-R-A (Pink Card)
  - Both cards must have original signatures. The information provided must match items 3 to 11 on the Form UIC-2 COM SWD Application.

- **Filing Fee**

  Check made payable to "Office of Conservation". Please refer to LAC 43:XIX.Chapter 7 for the current fee schedule or contact the IMD at (225) 342-5515.

- **Nonrefundable Hearing Fee**
  - **For a NEW DRILL or CONVERSION at a NEW FACILITY,** make check payable to "Office of Conservation". Please refer to LAC 43:XIX.Chapter 7 for the current fee schedule or contact the IMD at (225) 342-5515.
  - **For a NEW DRILL or CONVERSION at an EXISTING FACILITY,** not applicable unless a hearing is requested, and is subsequently approved by the Commissioner of Conservation.

- **APPLICATION** – Commercial Saltwater Disposal Well Permit Application
  - Form UIC-2 COM SWD with an original signature from an officer with the operating company authorized to certify the application.
  - All items must be answered or noted "N/A"--not applicable.

- **ATTACHMENT 1** -- Location Plat
  - **For a NEW DRILL, RE-DRILL, or RE-PERMIT**, include an original certified drilling location plat, labeled "Attachment 1." This plat may be combined with Attachment 2, as long as it is a certified plat. The IMD requires that the Location Plat contains geographic coordinates in GCS- Latitude, Longitude (NAD27 and NAD 83) and State Plane- X,Y (Lambert, NAD27 and NAD83) for the proposed COM SWD well. The location plat must reflect, at a minimum, a Class D Survey as defined by the Professional and Occupational Standards for Professional Engineers and Land Surveyors in LAC 46:LXI.2905.A.4. A Class D Survey requires a degree of accuracy to the nearest foot.
  - **For a CONVERSION**, include the drilling location plat, labeled "Attachment 1." It may be a photocopy if the correct State Plane- X,Y (Lambert, NAD27) coordinates are available in the DNR database (SONRIS). If State Plane- X,Y coordinates are missing or are incorrect in SONRIS, an original certified location plat must be submitted. This plat may be combined with Attachment 2 and must meet the same requirements as those defined for a new drill, re-drilled, or re-permitted wells.

- **ATTACHMENT 2** -- Area of Review

2A. Area of Review (AOR) Map (Attachment 2A)

The AOR map must identify, within a one-quarter-mile (1320-ft.) radius of the proposed injection well, the locations for the following:

- The proposed injection well
- All producing wells
- All injection wells
- All shut-in wells
- All plugged and abandoned wells

- All dry holes
- All source water wells (for enhanced recovery)
- All freshwater wells
- Include a legend to identify each well and to otherwise clarify the AOR map. Except for freshwater wells, only information on file with the Office of Conservation and pertinent information known to the applicant is required to be included on this map.

2B. AOR Well List (Attachment 2B)

The AOR Well List must identify all wells in the AOR except for the freshwater wells. A diligent search must be attempted to locate all wells within the AOR of the proposed injection well. The search must include:

- Conducting a foot-search of the AOR to identify any wells in the field;
- Searching SONRIS for wells in the DNR database; **AND**
- Researching field maps and company files.

The search should identify the following types of wells: all producing wells, all injection wells, all shut-in wells, all plugged and abandoned wells, all dry holes, and all source water wells (for enhanced recovery).

Applicants must complete the Area of Review Well List that is included in this application package. IMD will not accept printouts of the SONRIS database search in lieu of the Area of Review List. If no wells are found within the AOR, then type "No Wells Found" on "Attachment 2B".

2C. Freshwater Well List (Attachment 2C)

The Freshwater Well List must identify all the freshwater wells within the AOR. A diligent search must be attempted to locate all freshwater wells within the AOR of the proposed injection well. The search must include:

- Conducting a foot-search of the AOR to identify any freshwater wells in the field;
- Searching the Department of Transportation and Development's (DOTD) database of Registered Water Wells in the state of Louisiana (http://www.dotd.state.la.us/intermodal/wells/disclaimer.asp). A printout of the DOTD database search must be include with the application package; **AND**
- Researching company files for Rig Supply wells.

Applicants must complete the Freshwater Well List that is included in the Form UIC-2 SWD Application package. IMD will not accept printouts of the DOTD database search in lieu of the Freshwater Well List. All wells listed on the Freshwater Well List must be plotted on the Area of Review Map and/or the Location Plat.

2D. Include a printout of the DOTD database search of the AOR and label the list "Attachment 2D."

2E. Laboratory Analyses (Attachment 2E)

Include a laboratory analysis of a water sample from EACH freshwater well listed on "Attachment 2C." Identify each sample using the DOTD Well ID of the well that was sampled. If the well is not registered with the DOTD database, identify the sample using the well name that used to identify the well on the Freshwater Well List (Attachment 2C). The laboratory analysis must be a **signed original** from a LDEQ LELAP accredited laboratory. A PDF list of Accredited Laboratories can be found on the LDEQ website, http://www.deq.louisiana.gov, under ***Divisions >> Laboratory Services >> Laboratory Accreditation.*** The analysis sheet(s) must identify the freshwater well sampled, and, at a minimum, include measurement of:

- Chloride (mg/l)
- Total Dissolved Solids (mg/l)

Provide an explanation if samples are not obtainable.

- **ATTACHMENT 3** -- Facility Diagram

The diagram should be to scale (or reasonably close) and labeled, "Attachment 3." A surface facility diagram that shows the following, where applicable:

- Proposed well
- Storage tanks
- Containment levees
- Flow lines entering and leaving the facility
- Filters
- Treatment system/equipment
- Other Class II wells
- Access roads
- Buildings
- Unloading areas
- Barges
- Containers (including design capacities)
- All other equipment and operational features of the storage, treatment and/or disposal system

- **ATTACHMENT 4** -- Well Schematic Diagram

For a NEW DRILL, two attachments are required:

- A schematic diagram of the proposed well, labeled "Attachment 4A".
- A work prognosis describing the sequence of work to be performed, labeled "Attachment 4B".

For a CONVERSION, RE-DRILL, or RE-PERMIT, three attachments are required:

- A schematic diagram of the well as it currently exists (before conversion to injection), labeled "Attachment 4A".
- A schematic diagram of the well as it is proposed to be completed, labeled "Attachment 4B".
- A work prognosis describing the sequence of work to be performed, labeled "Attachment 4C".

If a cement bond log (CBL) has been run prior to submission of the application, please submit a copy with the application.

The schematic diagram(s) must match items 13 to 22 on the Form UIC-2 COM SWD Application and show the following:

Surface equipment:

- Well head
- Pressure gauges
- Flow line diameters at wellhead
- Monitoring equipment, if used

Subsurface equipment:

- All casing strings:
  - Diameter
  - Weight (per foot)
  - Depth set (top and bottom).

  Surface casing must extend at least 100 feet below the USDW.

- Hole (drill bit) diameters
- Cement specifications:
  - Type of class
  - Number of sacks
  - Tops of cement (indicate whether calculated, logged, or to be logged)
- Proposed cement squeeze(s), if any:
  - Type or class
  - Number of sacks
  - Calculated top of cement (to be logged)
- Injection tubing:
  - Diameter
  - Type or material
  - Depth
- Packer:
  - Type
  - Depth

    The packer must be set at or below the cement in the wellbore that is bonded to the first isolation shale formation immediately above the top of the proposed injection zone. But in no case, should the packer be set higher than 150 feet above the top of the proposed injection zone. Proof of isolation (bonded cement) must be provided by a cement bond log (CBL).
- Proposed injection zone (see notes for Attachment 7):
  - Top
  - Bottom
- Proposed initial perforated, open-hole, or screened interval:
  - Top
  - Bottom
- Depths:
  - Total Depth
  - Drilled-out depth (where applicable)
  - Plugged-back depth (where applicable)

STATE EXHIBIT NO. 1
DOCKET NO. Env 2025-01
PAGE 550 OF 699 PAGES

OFFICE OF CONSERVATION
SEP 19 2024
INJECTION AND MINING DIVISION

- **ATTACHMENT 5** -- Injection Fluid Analysis

A laboratory analysis of a representative sample of the fluid to be injected in the proposed well, labeled "Attachment 5". The laboratory analysis must be a **signed original** from a LDEQ LELAP accredited laboratory. A PDF list of Accredited Laboratories can be found on the LDEQ website, http://www.deq.louisiana.gov, under Divisions>>Laboratory Services>>Laboratory Accreditation.

The analysis sheet must indicate the source of the sample and IMD should be able to track the sample to the fluid source wells. At a minimum, the analysis should include measurement of:

- Chloride (mg/l)
- Specific gravity or density (g/cc or ppg)
- Total Dissolved Solids (mg/l)
- Temperature of sample when specific gravity was measured

- **ATTACHMENT 6** – MASIP Calculation Request

The Maximum Surface Injection Pressure (MASIP) can be calculated **based on the fracture gradient of the injection formation**, or **based on the fracture gradient of the confining formation**. Applicants must request how the MASIP should be calculated for the proposed well. Please refer to Attachment 6- MASIP Calculation Request (included in this application package) for additional information regarding each calculation's requirements. Complete, sign, and submit the request, with any other necessary information, as Attachment 6 of the Form UIC-2 SWD Application.

- **ATTACHMENT 7** – Electric Logs

For a NEW DRILL, please include electric logs (e-log) of the closest well to the proposed well location which show the proposed injection zone and USDW. E-logs of more than one well may be included, if necessary, to show both the lowermost USDW and proposed injection zone. A diligent search must be made to locate at least one e-log within one mile of the proposed well. If an e-log can not be located within one mile, a search may be extended up to two miles. If an e-log is not available, use a sheet of paper labeled, "Attachment 7" which states, "No e-logs are available from wells within a two-mile radius of the proposed well location".

For a CONVERSION, RE-DRILL, or RE-PERMIT, please include a duplicate of the original e-log or a photocopy of the e-log from the well proposed for conversion. If the lowermost USDW was not logged, please include an e-log from a well within a one-mile radius that shows the lowermost USDW.

Please apply the guidelines below and mark the following information on the e-logs:

- ***The Serial Number of the Well***

  Mark with e-log with the serial number of the well, and ensure that the complete e-log, from the header to the bottom logged interval, is submitted. The 5-inch/100-ft-scale portion is not necessary.

- ***The Base of the Lowermost Underground Source of Drinking Water (USDW)***

  Conduct a one-mile search from the proposed well location to locate the closest well with an e-log that shows the lowermost USDW. The USDW can be determined from the deep induction curve, generally the dotted curve, on the e-log. Resistivity changes with temperature and depth, therefore the guidelines below are used to approximate the lowermost USDW in sands at the following depths:

  - **Ground surface to 1,000 feet: 3 ohms or higher is considered USDW;**
  - **1,000 feet to 2,000 feet: 2 ½ ohms or higher is considered USDW; and**
  - **2,000 feet and deeper: 2 ohms or higher is considered USDW.**

  Clay or shale intervals with resistivities higher than these are not considered USDW's. Please provide an e-log from the search area that shows there is at least 100 feet of net shale between the top of the proposed injection zone and the base of the USDW.

- ***The Top and Bottom of the Proposed Injection Zone***

  - An injection zone consisting of multiple sands may be permitted, provided that the USDW and sands capable of hydrocarbon production are isolated. Permitting a zone of multiple sand units will allow for future perforations within the permitted injection zone by applying for a work permit (Form UIC-17).
  - Cement isolation confining the top of the proposed injection zone must be confirmed by a Cement Bond Log (CBL). The CBL must show cement in the wellbore bonded to the first isolating shale formation immediately above the approved injection zone.
  - The packer must be set at or below the cement isolation confining the top of the proposed injection zone, but no more than 150 feet above the top of zone.
  - Conduct a one-mile search from the proposed well location to locate productive wells. Ensure that there is at least 100 feet of net shale between the proposed injection zone and any productive intervals.

- ***The Proposed Perforated Interval***

- **ATTACHMENT 8** -- Geologic Cross Sections

Provide strike and dip geologic cross sections in the north-south and east-west directions, which intersect at the location of the proposed injection well. These cross sections must include, at a minimum:

- Available log control: label the serial number, well name, and well number of each e-log
- Geologic units
- Lithology from the surface to the lower confining bed below the proposed injection zone
- Local geology in at least a two-mile radius from the proposed injection well
- Base of the Underground Sources of Drinking Water
- Vertical and Lateral limits of the proposed injection zone (reservoir)
- Vertical and Lateral limits of the upper and lower confining beds
- Location of faults or other geologic structures
- Vertical and horizontal scales

- **ATTACHMENT 9** – Commercial Saltwater Disposal Well Closure Plan and Cost Estimate

Provide a closure plan for plugging and abandoning the proposed well and a cost estimate to implement the closure plan.

- **ATTACHMENT 10** -- Public Notice

An original copy of proof of publication of each legal notice. Please check for accuracy of serial number; well name and number; section, township, and range; etc. If these are not correct, the publication will not be acceptable. You will be billed by each journal for the publication.

Complete the legal notice attachment and send the notice to:

- The state journal: ***The Advocate*, Legal Ad Department, P.O. Box 588, Baton Rouge, LA 70821, (225) 388-0128.**
- The parish journal. Contact the Louisiana Secretary of State-Publication Division for a list of the parish journals at **(225) 922-0309** or view the list on-line at http://www.sos.louisiana.gov/pubs/pubs-opj.htm.
- The journal of general circulation.

The journal will send you a notarized "Proof of Publication", which is to be labeled, "Attachment 10", and included as part of the Application. If the Proof of Publication is not received when the Application is sent to the IMD, it may be sent later provided you also write the Application No. on the Public Notice. The "Application No." can be found on your receipt letter, which you should receive within two weeks after your Application reaches the IMD.

- **ATTACHMENT 11** -- Well History and Work Resume Report

- **For a CONVERSION or RE-PERMIT**, a photocopy of each Well History and Work Resume Report (Form WH-1) that have previously been filed with the Office of Conservation.
- **For a RE-DRILL**, a photocopy of the previously filed WH-1 that documents the plugging and abandonment of the well.
- **For a NEW DRILL**, there is no Attachment 11.

- **DUPLICATE COPY**

Please include a photocopy of the **complete application and attachments**. Both the "original" and the "photocopy" must be included to be considered a complete Application.

BENCHMARK - LSRC CORS - CSTA - COUSHATTA, LA.

NOTE: This plat does not represent a Property Boundary Survey, Route Survey or Unitization Survey and therefore does not comply with the applicable standards of practice stipulated in LAC Title 46:LXI, Chapter 29, Standards of Practice for Boundary Surveys as currently adopted by the Louisiana Professional Engineering and Land Surveying Board. It is, however, in compliance with the State of Louisiana, Department of Natural Resources, Office of Conservation, Injection and Mining Division Location Plat Requirements, Policy No. IMD-GS-10.

I, Benjamin C. Winn, Professional Land Surveyor, certify that the well location depicted and described in this plat was staked and surveyed in the field by me or under my direction with accuracy and precision to the nearest foot. I have properly examined this plat and have determined that it complies with existing local Louisiana codes, and has been property site adapted to use in this area.

8/09/2024

WORK PROGNOSIS

1. Notify Louisiana Department of Natural Resources prior to spud and 24 hours prior to cementing all casing strings.

2. Install location sign - make sure sign is in compliance with Louisiana Department of Natural Resources regulations and denotes the well to be an SWD.

3. Move in rig and equipment and rig up.

4. RIH with 13 1/2 in. bit drilling to 1200 ft. Circulate and condition hole.

5. Run 10 3/4 in. surface casing, 40.5 lbs/ft. to 1200 ft. and cement to surface with 295 sacks Lite (Yld 1.98 cu.ft./Sack, (100% excess)) and 265 sacks of Class A (Yld 1.19 cu.ft./Sack (100% excess)). WOC 12 hrs. Pressure test casing to a minimum of 1000 psi with not more than 5% loss in pressure in a 30-minute time period to determine casing integrity. Complete and sign Form CSG-T, submit originals upon completion of well (IMD requires the original).

6. Install and Test BOP according to Injection and Mining regulations; LAC 43:XIX.111.A & LAC 43:XIX.111.C.

7. RIH with 8 3/4 in. bit drilling to 5800 ft. Circulate and condition hole. R/U Wireline and run open hole w/triple combo log (GR/SP/RES) from TD through Surface Casing Shoe. Shoot Percussion Sidewall Cores in Proposed Injection Intervals (Optional).

8. Run 7 in. longstring casing, 26 lbs/ft. to 5800 ft. and cement to surface with 275 sacks 60:40 Lite cement (Yld 1.95 cu.ft./Sack) and 810 sacks Premium Class H cement (Yld 1.14 cu.ft./Sack (35% excess)). Spot 100' cement in 7" casing, 60 sacks of Class A cement, (Yld 1.19 cu.ft./Sack), PBTD-5700'. WOC 12 hrs. Pressure test casing to a minimum of 1000 psi with not more than 5% loss in pressure in a 30-minute time period to determine casing integrity. Complete and sign Form CSG-T, submit originals upon completion of well (IMD requires the original).

9. Run CBL/VDL/GR from total depth to surface casing. Evaluate cement bond log for possible squeezes. The log must show a minimum of 11 continuous feet of not less than 60% bonded cement (less than 7.5 millivolts) set across from the first isolating shale immediately above the top of the proposed injection zone and must show evidence of cement below the bottom of the injection zone. The CBL will be submitted to Injection and Mining, Engineering Department prior to perforating and setting the packer in the well to verify adequate cement isolation. If no additional cementing work is required, proceed with constructing the well. If additional cement work is required, perforate and squeeze as required by Injection and Mining Division and re-run

MASIP CALCULATION REQUEST

(Check the box next to the appropriate request and complete the requested information.)

☑ The applicant requests to calculate the Maximum Authorized Surface Injection Pressure (MASIP) **based on the fracture gradient of the injection formation**. As described in Intra-Office Policy Statement No. IMD 1999-03, the MASIP will be calculated not to exceed 90% of the calculated fracture pressure of the injection zone based on Eaton's Correlation of 9 ppg formation fluid. The following information has been provided:

- The specific gravity of the injection fluid is 1.10, as reported in Attachment 6 - Fluid Source Analyses.
- The top of the proposed perforations is 5520' feet, as given in Item No. 21 of the Form UIC-2 SWD application.
- An area of review of **one-quarter (¼) mile** (1,320 feet) has been conducted and all of the wells located within the radius have been identified in Attachment 2B. Each well in the AOR will be evaluated for deficiencies. If deficiencies exist, the well(s) will be properly plugged and abandoned or remediated using another approved corrective action to protect the USDW.

The signature provided at the bottom of this page certifies the applicant understands this requirement.

☐ The applicant requests to calculate the MASIP **based on the fracture gradient of the confining formation**. As described in Intra-Office Policy Statement No. IMD-GS-09, the MASIP will be calculated by limiting the pressure at the depth of injection to 75% the pressure needed to fracture the confining formation. The following information has been provided:

- The specific gravity of the injection fluid is, _____, as reported in the fluid source analyses (Attachment 6).
- The top of the proposed perforations, _____ feet, as given in Item No. 21 of the Form UIC-2 SWD application.
- The geomechanical data of the confining zone above the proposed injection zone ☐ has been or ☐ will be derived from one of the following methods:
  - ☐ Subsurface acquisition and testing of the confining beds,
  - ☐ Wireline logging to generate mechanical properties,
  - ☐ Leak-off testing of the confining beds using fluid with timed velocity, or
  - ☐ Other acceptable procedure: _____

  The results of the proposed procedure ☐ have been submitted as Attachment 7A, or ☐ will be submitted prior to issuance of a permit to inject for the proposed well.

- An area of review of **one-half (½) mile** (2,640 feet) has been conducted and all of the wells located within the radius have been identified in Attachment 2B. Each well in the AOR will be evaluated for deficiencies. If deficiencies exist, the well(s) will be properly plugged and abandoned or remediated using another approved corrective action to protect the USDW.
- The proposed top of the injection zone is approximately _____ feet from the base of the USDW. If the difference between the top of the proposed injection zone and the base of the USDW is less than 1,000 feet, then the MASIP will be based on a surface pressure gradient not to exceed 0.25 psi/ft, calculated with respect to the top of the proposed perforations or the top of the open-hole completion.
- The surface casing is set at least 100 feet below the base of the USDW.
- A groundwater monitoring plan has been submitted as Attachment 7B and includes all of the following provisions:
  - Installation of a monitoring well or wells that is screened or perforated at the base of the USDW.
  - Collection of fluid from the monitoring well or wells, which will be sampled by a third party and analyzed by a LDEQ, LELAP accredited laboratory on a quarterly basis for:
    - Chlorides
    - Total dissolved solids
    - BTEX
    - Specific gravity
    - Temperature
    - pH
  - Collection of a fluid level in the monitoring well or wells on a monthly basis.
  - Submission of a quarterly report, which includes all laboratory analytical data and fluid level measurements. The report will be submitted to the Injection and Mining Division within 30 days of the end of the quarter in which the sampling and measurements were performed. It is understood that failure to file reports or delinquent filings will result in enforcement actions.

The signature provided below certifies the applicant understands this requirement.

APPENDIX N – CLOSURE FUNDING

Closure plan and cost estimate {Section 519.C.14.(a)}

Brickyard Trucking, LLC will maintain a Surety Bond to be on file with the Office of Conservation to provide for adequate closure of the Brickyard Trucking, LLC Commercial SWD Wells and Facility.

Following is a description of the closure plan, cost estimate, and verification that these documents were provided by an independent professional consultant.

Draft documentation of closure funding {Section 519.C.14.(b)}

Following the closure plan, cost estimate, and verification is draft documentation of closure funding

BRICKYARD TRUCKING, LLC
BRICKYARD TRUCKING SWD NO. 001, NEW WELL
BIENVILLE PARISH, LOUISIANA

Plugging and Abandoning Procedure – Brickyard Trucking SWD NO. 001

1. Complete Form UIC-17 Injection Well Work Permit to Plug and Abandon (P & A) the Brickyard Trucking SWD No. 001, with attachments and fee, and submit to the Injection and Mining Division for approval.

2. Once Work Permit is approved, Contact Conservation Enforcement Specialist (CES) agent to witness plugging and abandoning procedure.

3. Move in workover rig and rig up. Install and Test Blowout Preventer (BOP). Record test.

4. Pressure test casing/tubing annulus. Bleed off pressure in both annulus and tubing. Use weighted fluid to kill well, if necessary.

5. Pull wellhead and surface equipment to remove injection string – (4 1/2" tubing). Release tension packer and pull 4 1/2" tubing and packer.

6. Run and set retainer with wireline unit at 6360'. Run 2 7/8 in. tubing and sting into retainer. Break down formation.

7. Squeeze perforations with 200 sacks of Class A cement or until locks up. Spot 200 ft. of cement on top of retainer (6360'-6160') with 40 sacks of Class A cement, 15.6 lb./gallon, yield of 1.18 cu./ft./sack. Wait 12 hours on cement.

8. Go in hole and tag cement. Pressure test to a minimum of 350 psi without more than 5% loss in pressure in a 30 min. period.

9. Pump 10#/gal mud on top of cement plug within wellbore.

10. Spot 600' cement plug from 1300'–700' with 110 sacks of Class A cement (Minimum of 100' inside and outside surface casing) 15.6 lb./gallon, yield of 1.18 cu./ft./sack. Wait 12 hours on cement.

11. Go in hole and tag cement. Pressure test plug to a minimum of 350 psi without more than 5% loss in pressure within a 30 min. period.

12. Pump 10#/gal mud on top of cement plug in wellbore.

13. Spot 100' Class A cement plug from 105' – 5' with 20 sacks of Class A cement, 15.6 lb./gallon, yield of 1.18 cu./ft./sack. Run tremie pipe in surface casing (10 ¾") and long string casing (7") annulus and pump 50 sacks of Class A cement, 15.6 lb./gallon, yield of 1.18 cu./ft./sack down annulus.

14. Cut all casing 5' below ground surface. Weld ½" steel plate on each casing string. Weld serial number and P&A date on top of plate.

15. Cover steel plate with soil and remediate area, remove all equipment, and restore location.

Upon completion of the application process, the commissioner will set the amount of the required bond or irrevocable letter of credit in accordance with LAC 43: XIX.519.C.14b. The applicant will obtain the required bond or irrevocable letter of credit in that amount set by the commissioner. A draft irrevocable letter of credit and Surety Bond are attached.

DRAFT IRREVOCABLE LETTER OF CREDIT

Dear Sirs:

We hereby establish our Irrevocable Letter of Credit No. _____ in your favor, at the request and for the account of **Brickyard Trucking, LLC** up to the aggregate amount of (amount) available upon presentation by the Commissioner of Conservation, Office of Conservation, Department of Energy and Natural Resources, State of Louisiana on:

1. your sight draft, bearing reference to this letter of Credit No. _____; and

2. your signed statement reading as follows: "I certify that the amount of the draft is payable pursuant to regulation issued in accordance with the requirements of Louisiana R.S.30:1 et seq."

This letter of credit is effective as of _____, *20__*, and must be renewable on October 1, _20_____, and on each successive expiration date, unless at 120 days before the current expiration date, we notify both you and **Brickyard Trucking, LLC**. Documentation that the required closure bond or letter of credit has been renewed must be received by September 15th of each year, unless at least 120 days before the current expiration date, we notify both you and **Brickyard Trucking, LLC** by certified mail that we have decided not to extend this letter of credit beyond the current expiration date. In the event you are so notified, any unused portion of the credit shall be available upon presentation of your sight draft for 120 days after the date of receipt by both you and **Brickyard Trucking, LLC** as shown on the signed return receipts.

This letter is subject to the Uniform Customs and Practice for Documentary Credits (2007 Revision) fixed by the International Chamber of Commerce Brochure No. 600 ("UCP 600").

We hereby agree with you and negotiating banks or bankers that drafts drawn under and in compliance with the terms of this credit shall be duly honored on due presentation to the drawee.

STATE OF LOUISIANA
PARISH OF EAST BATON ROUGE

DRAFT SURETY BOND

FROM: BRICKYARD TRUCKING, LLC
AND
SURETY

TO: OFFICE OF CONSERVATION
DEPARTMENT OF ENERGY AND NATURAL RESOURCES
STATE OF LOUISIANA

THIS SURETY BOND is given by Brickyard Trucking, LLC, principal, and [surety name], Surety, to Office of Conservation, Department of Energy and Natural Resources, State of Louisiana, P.O. Box 94275, 70804 - 9275, pursuant to the following terms and conditions:

Principal and surety are bound to creditor in the sum of $[TBD] Dollars, for the payment of which principal and surety jointly and severally bind themselves, their successors, and assigns.

Principal has applied to Creditor to receive a permit or has in effect a permit issued by Creditor to operate a commercial facility, Site Code TBD, for the receipt, storage, treatment and/or disposal of exploration and production waste in BIENVILLE Parish, Louisiana pursuant to the provisions of LSA-R.S. 30:4(I)(10), and LAC43: XIX. Subpart 1. Chapter 5, Sections 513 and 567. Principal is required to provide bonding to ensure the adequate closure of such facility and this bond is issued for said purpose.

This obligation shall run continuously and shall remain in full force and effect until and unless the bond is canceled as provided herein or as otherwise provided by law.

Surety may cancel the bond only by sending notice of cancellation by certified mail to both Principal and Creditor. Cancellation cannot occur or be effective until 120 days after the date of receipt of notice of cancellation by both Principal and Creditor. Further, such notice of cancellation or cancellation shall not affect this surety bond in respect to any obligation which may have arisen prior thereto.

Surety shall become liable on this bond obligation, if and when Principal fails to perform his obligation to adequately close the facility as determined by Creditor after notice and in accordance with administrative procedures.

Following such determinations, Creditors shall draw on the surety bond by requesting payment by certified mail, and Surety shall pay the amount thereof within 30 days of receipt of said demand. If payment is not made within said 30 days period Surety shall also be liable for legal interest from date of receipt of demand, 10% of principal and interest as attorney's fees and all court cost incurred to collect the obligation.

The amount of the bond liability is as expressed herein, but Principal and Surety take notice of the legal requirements for annual review of the closure bond amounts, which is based upon cost estimates for adequate closure. Following this review Creditor may increase, decrease, or allow the amount to remain the same. Upon notice from Creditor, if an increase is required, Principal shall cause the bond amount to be increased or shall otherwise provide the added security within 60 days after notice.

I WITNESS WHEREOF, the principal and Surety have executed this surety bond at _____ on this _____ day of _____, 20____.

RE: **Commercial SWD-New Drill**
Brickyard Trucking, LLC (B1119)
Brickyard Trucking SWD Nos. 001, 002 & 003
Jamestown Field (4738) / Bienville Parish, Louisiana

Dear Sir or Madam:

As per the Louisiana Department of Energy and Natural Resources – Injection & Mining Division requirements for PE and PG Certifications for Class II Commercial Saltwater Disposal Wells, the undersigned Registered Professional Engineer has overseen the preparation of the following engineering documents:

1. Attachment 4A – Proposed Wellbore Schematic for the Brickyard Trucking SWD Nos. 001, 002 & 003
2. Attachment 4B – Proposed Work Prognosis for the Brickyard Trucking SWD 001, 002 & 003
3. Attachment 9 – P&A Wellbore Schematic for the Brickyard Trucking SWD Nos. 001, 002 & 003
4. Attachment N 14 – Closure Funding for the Brickyard Trucking, LLC Facility.

I certify to the best of my knowledge that the calculations used within are reasonable and that the documents are accurate.

Sincerely,

Robert B. Raines, III P.E.
Vice-President

PERMITTING PROCESS

- Upon receipt of the original submittal, an Initial Application Review letter will be sent out by the Injection and Mining Division (IMD) noting missing or incorrect information.

- Additional revisions to the application may be requested as the application progresses through the technical review process. Please include the 'Application No.' assigned by IMD on the upper right corner of each page of the revisions. The 'Application No.' can be found on your receipt letter, which you should receive within two weeks of receipt of your Application by IMD.

- The permitting process is a two-step procedure:

1st Step: After the Application is reviewed and found to be complete and to meet the requirements of Statewide Order 29-B, an "Approval to Construct" letter will be issued. This will allow the well to be drilled and completed or to be converted as described in the Application, but **NOT TO INJECT**. A list describing the "Reporting Requirements" will be included with the "Approval to Construct" letter. The "Reporting Requirements" will tell you what you need to file with the Injection & Mining Division (IMD) after completion of the well and before issuance of the final well PERMIT TO INJECT.

2nd Step: The Well History, mechanical integrity test results (witnessed by a IMD inspector), and logs are reviewed. If found adequate, a final "Permit" letter to inject fluids will be issued. If not adequate, the IMD will tell you what remedial action, if any, can be taken to obtain a "PERMIT TO INJECT".

PUBLIC NOTICE

- **For a proposed COM SWD WELL at a NEW FACILITY:**

  Refer to LAC 43:XIX.519.B for public notice guidance for proposed Commercial SWD Wells at a New Commercial Facility.

- **For a proposed COM SWD WELL at an EXISTING FACILITY:**

  Refer to LAC 43:XIX.529.B for public notice guidance for proposed Commercial SWD Wells at an Existing Commercial Facility.

OFFICE OF CONSERVATION
SEP 19 2024
INJECTION AND MINING DIVISION

APPLICATION GUIDELINES

- These procedures are intended to provide applicants with a checklist to ensure all information is provided. Depending on the given well, additional items may be required.

- This list applies to new wells to be drilled and those to be converted, re-drilled, or re-permitted for injection.

- Supporting documentation is required in the form of attachments. Label each of the attachments by number in the lower right-hand corner; example: "Attachment 2A".

- Any Orders pertaining to the permitting of this well should also be attached.

- Items 30 through 33 of the Form UIC-2 COM SWD Application should be certified with an original signature from an associate of the operating company. The associate may be an officer; manager; general partner; proprietor; operator of the well, field or facility; or any direct employee of the operating company employed in a decision-making role. This Division will not accept a signature from an agent or consultant of the operating company to certify the application.

- If the surface casing is not set 100 feet below the base of the Underground Source of Drinking Water (USDW), please contact a Geologist with this Division for guidelines pertaining to surface casing variances.

STATE EXHIBIT NO. 1
DOCKET NO. Env 2025-01
PAGE 641 OF 699 PAGES

SUBMIT THE APPLICATION IN THE FOLLOWING ORDER:

- **Application for Permit or to Amend Permit to Drill for Minerals**
  - **For a NEW DRILL or RE-DRILL**, two copies of completed form MD-10-R (Yellow Card)
  - **For a CONVERSION or RE-PERMIT**, two copies of completed form MD-10-R-A (Pink Card)
  - Both cards must have original signatures. The information provided must match items 3 to 11 on the Form UIC-2 COM SWD Application.

- **Filing Fee**

  Check made payable to "Office of Conservation". Please refer to LAC 43:XIX.Chapter 7 for the current fee schedule or contact the IMD at (225) 342-5515.

- **Nonrefundable Hearing Fee**
  - **For a NEW DRILL or CONVERSION at a NEW FACILITY,** make check payable to "Office of Conservation". Please refer to LAC 43:XIX.Chapter 7 for the current fee schedule or contact the IMD at (225) 342-5515.
  - **For a NEW DRILL or CONVERSION at an EXISTING FACILITY,** not applicable unless a hearing is requested, and is subsequently approved by the Commissioner of Conservation.

- **APPLICATION** – Commercial Saltwater Disposal Well Permit Application
  - Form UIC-2 COM SWD with an original signature from an officer with the operating company authorized to certify the application.
  - All items must be answered or noted "N/A"--not applicable.

- **ATTACHMENT 1** -- Location Plat
  - **For a NEW DRILL, RE-DRILL, or RE-PERMIT**, include an original certified drilling location plat, labeled "Attachment 1." This plat may be combined with Attachment 2, as long as it is a certified plat. The IMD requires that the Location Plat contains geographic coordinates in GCS- Latitude, Longitude (NAD27 and NAD 83) and State Plane- X,Y (Lambert, NAD27 and NAD83) for the proposed COM SWD well. The location plat must reflect, at a minimum, a Class D Survey as defined by the Professional and Occupational Standards for Professional Engineers and Land Surveyors in LAC 46:LXI.2905.A.4. A Class D Survey requires a degree of accuracy to the nearest foot.
  - **For a CONVERSION**, include the drilling location plat, labeled "Attachment 1." It may be a photocopy if the correct State Plane- X,Y (Lambert, NAD27) coordinates are available in the DNR database (SONRIS). If State Plane- X,Y coordinates are missing or are incorrect in SONRIS, an original certified location plat must be submitted. This plat may be combined with Attachment 2 and must meet the same requirements as those defined for a new drill, re-drilled, or re-permitted wells.

- **ATTACHMENT 2** -- Area of Review

  2A. Area of Review (AOR) Map (Attachment 2A)

  The AOR map must identify, within a one-quarter-mile (1320-ft.) radius of the proposed injection well, the locations for the following:
  - The proposed injection well
  - All producing wells
  - All injection wells
  - All shut-in wells
  - All plugged and abandoned wells

OFFICE OF CONSERVATION

SEP 19 2024

INJECTION AND MINING DIVISION

STATE EXHIBIT NO. 1
DOCKET NO. Env 2025-01
PAGE 642 OF 699 PAGES

- All dry holes
- All source water wells (for enhanced recovery)
- All freshwater wells
- Include a legend to identify each well and to otherwise clarify the AOR map. Except for freshwater wells, only information on file with the Office of Conservation and pertinent information known to the applicant is required to be included on this map.

2B. AOR Well List (Attachment 2B)

The AOR Well List must identify all wells in the AOR except for the freshwater wells. A diligent search must be attempted to locate all wells within the AOR of the proposed injection well. The search must include:

- Conducting a foot-search of the AOR to identify any wells in the field;
- Searching SONRIS for wells in the DNR database; **AND**
- Researching field maps and company files.

The search should identify the following types of wells: all producing wells, all injection wells, all shut-in wells, all plugged and abandoned wells, all dry holes, and all source water wells (for enhanced recovery).

Applicants must complete the Area of Review Well List that is included in this application package. IMD will not accept printouts of the SONRIS database search in lieu of the Area of Review List. If no wells are found within the AOR, then type "No Wells Found" on "Attachment 2B".

2C. Freshwater Well List (Attachment 2C)

The Freshwater Well List must identify all the freshwater wells within the AOR. A diligent search must be attempted to locate all freshwater wells within the AOR of the proposed injection well. The search must include:

- Conducting a foot-search of the AOR to identify any freshwater wells in the field;
- Searching the Department of Transportation and Development's (DOTD) database of Registered Water Wells in the state of Louisiana (http://www.dotd.state.la.us/intermodal/wells/disclaimer.asp). A printout of the DOTD database search must be include with the application package; **AND**
- Researching company files for Rig Supply wells.

Applicants must complete the Freshwater Well List that is included in the Form UIC-2 SWD Application package. IMD will not accept printouts of the DOTD database search in lieu of the Freshwater Well List. All wells listed on the Freshwater Well List must be plotted on the Area of Review Map and/or the Location Plat.

2D. Include a printout of the DOTD database search of the AOR and label the list "Attachment 2D."

2E. Laboratory Analyses (Attachment 2E)

Include a laboratory analysis of a water sample from EACH freshwater well listed on "Attachment 2C." Identify each sample using the DOTD Well ID of the well that was sampled. If the well is not registered with the DOTD database, identify the sample using the well name that used to identify the well on the Freshwater Well List (Attachment 2C). The laboratory analysis must be a **signed original** from a LDEQ LELAP accredited laboratory. A PDF list of Accredited Laboratories can be found on the LDEQ website, http://www.deq.louisiana.gov, under ***Divisions >> Laboratory Services >> Laboratory Accreditation.*** The analysis sheet(s) must identify the freshwater well sampled, and, at a minimum, include measurement of:

- Chloride (mg/l)
- Total Dissolved Solids (mg/l)

Provide an explanation if samples are not obtainable.

- **ATTACHMENT 3** -- Facility Diagram

The diagram should be to scale (or reasonably close) and labeled, "Attachment 3." A surface facility diagram that shows the following, where applicable:

- Proposed well
- Storage tanks
- Containment levees
- Flow lines entering and leaving the facility
- Filters
- Treatment system/equipment
- Other Class II wells
- Access roads
- Buildings
- Unloading areas
- Barges
- Containers (including design capacities)
- All other equipment and operational features of the storage, treatment and/or disposal system

- **ATTACHMENT 4** -- Well Schematic Diagram

For a NEW DRILL, two attachments are required:

- A schematic diagram of the proposed well, labeled "Attachment 4A".
- A work prognosis describing the sequence of work to be performed, labeled "Attachment 4B".

For a CONVERSION, RE-DRILL, or RE-PERMIT, three attachments are required:

- A schematic diagram of the well as it currently exists (before conversion to injection), labeled "Attachment 4A".
- A schematic diagram of the well as it is proposed to be completed, labeled "Attachment 4B".
- A work prognosis describing the sequence of work to be performed, labeled "Attachment 4C".

If a cement bond log (CBL) has been run prior to submission of the application, please submit a copy with the application.

The schematic diagram(s) must match items 13 to 22 on the Form UIC-2 COM SWD Application and show the following:

Surface equipment:

- Well head
- Pressure gauges
- Flow line diameters at wellhead
- Monitoring equipment, if used

Subsurface equipment:

- All casing strings:
  - Diameter
  - Weight (per foot)
  - Depth set (top and bottom).

Surface casing must extend at least 100 feet below the USDW.

- Hole (drill bit) diameters
- Cement specifications:
  - Type of class
  - Number of sacks
  - Tops of cement (indicate whether calculated, logged, or to be logged)
- Proposed cement squeeze(s), if any:
  - Type or class
  - Number of sacks
  - Calculated top of cement (to be logged)
- Injection tubing:
  - Diameter
  - Type or material
  - Depth
- Packer:
  - Type
  - Depth

    The packer must be set at or below the cement in the wellbore that is bonded to the first isolation shale formation immediately above the top of the proposed injection zone. But in no case, should the packer be set higher than 150 feet above the top of the proposed injection zone. Proof of isolation (bonded cement) must be provided by a cement bond log (CBL).
- Proposed injection zone (see notes for Attachment 7):
  - Top
  - Bottom
- Proposed initial perforated, open-hole, or screened interval:
  - Top
  - Bottom
- Depths:
  - Total Depth
  - Drilled-out depth (where applicable)
  - Plugged-back depth (where applicable)

- **ATTACHMENT 5** -- Injection Fluid Analysis

A laboratory analysis of a representative sample of the fluid to be injected in the proposed well, labeled "Attachment 5". The laboratory analysis must be a **signed original** from a LDEQ LELAP accredited laboratory. A PDF list of Accredited Laboratories can be found on the LDEQ website, http://www.deq.louisiana.gov, under Divisions>>Laboratory Services>>Laboratory Accreditation.

The analysis sheet must indicate the source of the sample and IMD should be able to track the sample to the fluid source wells. At a minimum, the analysis should include measurement of:

- Chloride (mg/l)
- Specific gravity or density (g/cc or ppg)
- Total Dissolved Solids (mg/l)
- Temperature of sample when specific gravity was measured

- **ATTACHMENT 6** – MASIP Calculation Request

The Maximum Surface Injection Pressure (MASIP) can be calculated **based on the fracture gradient of the injection formation**, or **based on the fracture gradient of the confining formation**. Applicants must request how the MASIP should be calculated for the proposed well. Please refer to Attachment 6- MASIP Calculation Request (included in this application package) for additional information regarding each calculation's requirements. Complete, sign, and submit the request, with any other necessary information, as Attachment 6 of the Form UIC-2 SWD Application.

- **ATTACHMENT 7** -- Electric Logs

For a NEW DRILL, please include electric logs (e-log) of the closest well to the proposed well location which show the proposed injection zone and USDW. E-logs of more than one well may be included, if necessary, to show both the lowermost USDW and proposed injection zone. A diligent search must be made to locate at least one e-log within one mile of the proposed well. If an e-log can not be located within one mile, a search may be extended up to two miles. If an e-log is not available, use a sheet of paper labeled, "Attachment 7" which states, "No e-logs are available from wells within a two-mile radius of the proposed well location".

For a CONVERSION, RE-DRILL, or RE-PERMIT, please include a duplicate of the original e-log or a photocopy of the e-log from the well proposed for conversion. If the lowermost USDW was not logged, please include an e-log from a well within a one-mile radius that shows the lowermost USDW.

Please apply the guidelines below and mark the following information on the e-logs:

- ***The Serial Number of the Well***

  Mark with e-log with the serial number of the well, and ensure that the complete e-log, from the header to the bottom logged interval, is submitted. The 5-inch/100-ft-scale portion is not necessary.

- ***The Base of the Lowermost Underground Source of Drinking Water (USDW)***

  Conduct a one-mile search from the proposed well location to locate the closest well with an e-log that shows the lowermost USDW. The USDW can be determined from the deep induction curve, generally the dotted curve, on the e-log. Resistivity changes with temperature and depth, therefore the guidelines below are used to approximate the lowermost USDW in sands at the following depths:

  - **Ground surface to 1,000 feet: 3 ohms or higher is considered USDW;**
  - **1,000 feet to 2,000 feet: 2 ½ ohms or higher is considered USDW; and**
  - **2,000 feet and deeper: 2 ohms or higher is considered USDW.**

  Clay or shale intervals with resistivities higher than these are not considered USDW's. Please provide an e-log from the search area that shows there is at least 100 feet of net shale between the top of the proposed injection zone and the base of the USDW.

OFFICE OF CONSERVATION

SEP 19 2024

INJECTION AND MINING DIVISION

- ***The Top and Bottom of the Proposed Injection Zone***
  - An injection zone consisting of multiple sands may be permitted, provided that the USDW and sands capable of hydrocarbon production are isolated. Permitting a zone of multiple sand units will allow for future perforations within the permitted injection zone by applying for a work permit (Form UIC-17).
  - Cement isolation confining the top of the proposed injection zone must be confirmed by a Cement Bond Log (CBL). The CBL must show cement in the wellbore bonded to the first isolating shale formation immediately above the approved injection zone.
  - The packer must be set at or below the cement isolation confining the top of the proposed injection zone, but no more than 150 feet above the top of zone.
  - Conduct a one-mile search from the proposed well location to locate productive wells. Ensure that there is at least 100 feet of net shale between the proposed injection zone and any productive intervals.

- ***The Proposed Perforated Interval***

- **ATTACHMENT 8** -- Geologic Cross Sections

  Provide strike and dip geologic cross sections in the north-south and east-west directions, which intersect at the location of the proposed injection well. These cross sections must include, at a minimum:

  - Available log control: label the serial number, well name, and well number of each e-log
  - Geologic units
  - Lithology from the surface to the lower confining bed below the proposed injection zone
  - Local geology in at least a two-mile radius from the proposed injection well
  - Base of the Underground Sources of Drinking Water
  - Vertical and Lateral limits of the proposed injection zone (reservoir)
  - Vertical and Lateral limits of the upper and lower confining beds
  - Location of faults or other geologic structures
  - Vertical and horizontal scales

- **ATTACHMENT 9** – Commercial Saltwater Disposal Well Closure Plan and Cost Estimate

  Provide a closure plan for plugging and abandoning the proposed well and a cost estimate to implement the closure plan.

- **ATTACHMENT 10** -- Public Notice

  An original copy of proof of publication of each legal notice. Please check for accuracy of serial number; well name and number; section, township, and range; etc. If these are not correct, the publication will not be acceptable. You will be billed by each journal for the publication.

  Complete the legal notice attachment and send the notice to:

  - The state journal: ***The Advocate*, Legal Ad Department, P.O. Box 588, Baton Rouge, LA 70821, (225) 388-0128.**
  - The parish journal. Contact the Louisiana Secretary of State-Publication Division for a list of the parish journals at **(225) 922-0309** or view the list on-line at http://www.sos.louisiana.gov/pubs/pubs-opj.htm.
  - The journal of general circulation.

  The journal will send you a notarized "Proof of Publication", which is to be labeled, "Attachment 10", and included as part of the Application. If the Proof of Publication is not received when the Application is sent to the IMD, it may be sent later provided you also write the Application No. on the Public Notice. The "Application No." can be found on your receipt letter, which you should receive within two weeks after your Application reaches the IMD.

- **ATTACHMENT 11** -- Well History and Work Resume Report

  - **For a CONVERSION or RE-PERMIT**, a photocopy of each Well History and Work Resume Report (Form WH-1) that have previously been filed with the Office of Conservation.
  - **For a RE-DRILL**, a photocopy of the previously filed WH-1 that documents the plugging and abandonment of the well.
  - **For a NEW DRILL**, there is no Attachment 11.

WORK PROGNOSIS

1. Notify Louisiana Department of Natural Resources prior to spud and 24 hours prior to cementing all casing strings.

2. Install location sign - make sure sign is in compliance with Louisiana Department of Natural Resources regulations and denotes the well to be an SWD.

3. Move in rig and equipment and rig up.

4. RIH with 13 1/2 in. bit drilling to 1200 ft. Circulate and condition hole.

5. Run 10 3/4 in. surface casing, 40.5 lbs/ft. to 1200 ft. and cement to surface with 295 sacks Lite (Yld 1.98 cu.ft./Sack, (100% excess)) and 265 sacks of Class A (Yld 1.19 cu.ft./Sack (100% excess)). WOC 12 hrs. Pressure test casing to a minimum of 1000 psi with not more than 5% loss in pressure in a 30-minute time period to determine casing integrity. Complete and sign Form CSG-T, submit originals upon completion of well (IMD requires the original).

6. Install and Test BOP according to Injection and Mining regulations; LAC 43: XIX.111.A and LAC 43: XIX.111.C.

7. RIH with 8 3/4 in. bit drilling to 5800 ft. Circulate and condition hole. R/U Wireline and run open hole w/triple combo log (GR/SP/RES) from TD through Surface Casing Shoe. Shoot Percussion Sidewall Cores in Proposed Injection Intervals (Optional).

8. Go in hole with drill pipe and spot cement plug in 8 3/4" hole from 5800 ft. to 5000 ft. with 350 sacks of Class A (Yld 1.19 cu.ft./Sack (25% excess)). WOC 12 hrs. Run in hole with drill pipe and tag cement plug.

9. Run 7 in. longstring casing, 26 lbs/ft. to 5000 ft. and cement to surface with 175 sacks 60:40 Lite cement (Yld 1.95 cu.ft./Sack) and 810 sacks Premium Class H cement (Yld 1.14 cu.ft./Sack (35% excess)). Spot 100' cement in 7" casing, 60 sacks of Class A cement (Yld 1.19 cu.ft./Sack) PBTD-4900 ft. WOC 12 hrs. Pressure test casing to a minimum of 1000 psi with not more than 5% loss in pressure in a 30-minute time period to determine casing integrity. Complete and sign Form CSG-T, submit originals upon completion of well (IMD requires the original).

10. Run CBL/VDL/GR from total depth to surface casing. Evaluate cement bond log for possible squeezes. The log must show a minimum of 11 continuous feet of not less than 60% bonded cement (less than 7.5 millivolts) set across from the first isolating shale immediately above the top of the proposed injection zone and must show evidence of cement below the bottom of the injection zone. The CBL will be submitted to Injection and Mining, Engineering Department prior to perforating and setting the packer in the well to verify adequate cement isolation. If no

MASIP CALCULATION REQUEST

(Check the box next to the appropriate request and complete the requested information.)

☑ The applicant requests to calculate the Maximum Authorized Surface Injection Pressure (MASIP) **based on the fracture gradient of the injection formation**. As described in Intra-Office Policy Statement No. IMD 1999-03, the MASIP will be calculated not to exceed 90% of the calculated fracture pressure of the injection zone based on Eaton's Correlation of 9 ppg formation fluid. The following information has been provided:

- The specific gravity of the injection fluid is 1.075, as reported in Attachment 6 - Fluid Source Analyses.
- The top of the proposed perforations is 4240 feet, as given in Item No. 21 of the Form UIC-2 SWD application.
- An area of review of **one-quarter (¼) mile** (1,320 feet) has been conducted and all of the wells located within the radius have been identified in Attachment 2B. Each well in the AOR will be evaluated for deficiencies. If deficiencies exist, the well(s) will be properly plugged and abandoned or remediated using another approved corrective action to protect the USDW.

The signature provided at the bottom of this page certifies the applicant understands this requirement.

☐ The applicant requests to calculate the MASIP **based on the fracture gradient of the confining formation**. As described in Intra-Office Policy Statement No. IMD-GS-09, the MASIP will be calculated by limiting the pressure at the depth of injection to 75% the pressure needed to fracture the confining formation. The following information has been provided:

- The specific gravity of the injection fluid is, _____, as reported in the fluid source analyses (Attachment 6).
- The top of the proposed perforations, _____ feet, as given in Item No. 21 of the Form UIC-2 SWD application.
- The geomechanical data of the confining zone above the proposed injection zone ☐ has been or ☐ will be derived from one of the following methods:

OFFICE OF CONSERVATION

  - ☐ Subsurface acquisition and testing of the confining beds,
  - ☐ Wireline logging to generate mechanical properties,
  - ☐ Leak-off testing of the confining beds using fluid with timed velocity, or
  - ☐ Other acceptable procedure: _____

SEP 19 2024

INJECTION AND MINING DIVISION

  The results of the proposed procedure ☐ have been submitted as Attachment 7A, or ☐ will be submitted prior to issuance of a permit to inject for the proposed well.

- An area of review of **one-half (½) mile** (2,640 feet) has been conducted and all of the wells located within the radius have been identified in Attachment 2B. Each well in the AOR will be evaluated for deficiencies. If deficiencies exist, the well(s) will be properly plugged and abandoned or remediated using another approved corrective action to protect the USDW.
- The proposed top of the injection zone is approximately _____ feet from the base of the USDW. If the difference between the top of the proposed injection zone and the base of the USDW is less than 1,000 feet, then the MASIP will be based on a surface pressure gradient not to exceed 0.25 psi/ft, calculated with respect to the top of the proposed perforations or the top of the open-hole completion.
- The surface casing is set at least 100 feet below the base of the USDW.
- A groundwater monitoring plan has been submitted as Attachment 7B and includes all of the following provisions:
  - Installation of a monitoring well or wells that is screened or perforated at the base of the USDW.
  - Collection of fluid from the monitoring well or wells, which will be sampled by a third party and analyzed by a LDEQ, LELAP accredited laboratory on a quarterly basis for:
    - Chlorides
    - Total dissolved solids
    - BTEX
    - Specific gravity
    - Temperature
    - pH
  - Collection of a fluid level in the monitoring well or wells on a monthly basis.
  - Submission of a quarterly report, which includes all laboratory analytical data and fluid level measurements. The report will be submitted to the Injection and Mining Division within 30 days of the end of the quarter in which the sampling and measurements were performed. It is understood that failure to file reports or delinquent filings will result in enforcement actions.

The signature provided below certifies the applicant understands this requirement.

APPENDIX N – CLOSURE FUNDING

Closure plan and cost estimate {Section 519.C.14.(a)}

Brickyard Trucking, LLC will maintain a Surety Bond to be on file with the Office of Conservation to provide for adequate closure of the Brickyard Trucking, LLC Commercial SWD Wells and Facility.

Following is a description of the closure plan, cost estimate, and verification that these documents were provided by an independent professional consultant.

Draft documentation of closure funding {Section 519.C.14.(b)}

Following the closure plan, cost estimate, and verification is draft documentation of closure funding

BRICKYARD TRUCKING, LLC
BRICKYARD TRUCKING SWD NO. 001, NEW WELL
BIENVILLE PARISH, LOUISIANA

Plugging and Abandoning Procedure – Brickyard Trucking SWD NO. 001

1. Complete Form UIC-17 Injection Well Work Permit to Plug and Abandon (P & A) the Brickyard Trucking SWD No. 001, with attachments and fee, and submit to the Injection and Mining Division for approval.

2. Once Work Permit is approved, Contact Conservation Enforcement Specialist (CES) agent to witness plugging and abandoning procedure.

3. Move in workover rig and rig up. Install and Test Blowout Preventer (BOP). Record test.

4. Pressure test casing/tubing annulus. Bleed off pressure in both annulus and tubing. Use weighted fluid to kill well, if necessary.

5. Pull wellhead and surface equipment to remove injection string – (4 1/2" tubing). Release tension packer and pull 4 1/2" tubing and packer.

6. Run and set retainer with wireline unit at 6360'. Run 2 7/8 in. tubing and sting into retainer. Break down formation.

7. Squeeze perforations with 200 sacks of Class A cement or until locks up. Spot 200 ft. of cement on top of retainer (6360'-6160') with 40 sacks of Class A cement, 15.6 lb./gallon, yield of 1.18 cu./ft./sack. Wait 12 hours on cement.

8. Go in hole and tag cement. Pressure test to a minimum of 350 psi without more than 5% loss in pressure in a 30 min. period.

9. Pump 10#/gal mud on top of cement plug within wellbore.

10. Spot 600' cement plug from 1300'–700' with 110 sacks of Class A cement (Minimum of 100' inside and outside surface casing) 15.6 lb./gallon, yield of 1.18 cu./ft./sack. Wait 12 hours on cement.

OFFICE OF CONSERVATION

11. Go in hole and tag cement. Pressure test plug to a minimum of 350 psi without more than 5% loss in pressure within a 30 min. period.

SEP 19 2024

12. Pump 10#/gal mud on top of cement plug in wellbore.

INJECTION AND MINING DIVISION

13. Spot 100' Class A cement plug from 105' – 5' with 20 sacks of Class A cement, 15.6 lb./gallon, yield of 1.18 cu./ft./sack. Run tremie pipe in surface casing (10 ¾") and long string casing (7") annulus and pump 50 sacks of Class A cement, 15.6 lb./gallon, yield of 1.18 cu./ft./sack down annulus.

14. Cut all casing 5' below ground surface. Weld ½" steel plate on each casing string. Weld serial number and P&A date on top of plate.

15. Cover steel plate with soil and remediate area, remove all equipment, and restore location.

Plugging and Abandoning Procedure – Brickyard Trucking SWD NO. 003

1. Complete Form UIC-17 Injection Well Work Permit to Plug and Abandon (P & A) the Brickyard Trucking SWD No. 003, with attachments and fee, and submit to the Injection and Mining Division for approval.

2. Once Work Permit is approved, Contact Conservation Enforcement Specialist (CES) agent to witness plugging and abandoning procedure.

3. Move in workover rig and rig up. Install and Test Blowout Preventer (BOP). Record test.

4. Pressure test casing/tubing annulus. Bleed off pressure in both annulus and tubing. Use weighted fluid to kill well if necessary.

5. Pull wellhead and surface equipment to remove injection string – (4 1/2" tubing). Release tension packer and pull 4 1/2" tubing and packer.

6. Run in hole and set retainer with wireline unit at 4200'. Run 2 7/8 in. tubing and sting into retainer. Break down formation.

7. Squeeze perforations with 200 sacks of Class A cement or until locks up. Spot 200 ft. of cement on top of retainer (4200'-4000') with 40 sacks of Class A cement, 15.6 lb./gallon, yield of 1.18 cu./ft./sack. Wait 12 hours on cement.

8. Go in hole and tag cement. Pressure test to a minimum of 350 psi without more than 5% loss in pressure in a 30 min. period.

9. Pump 10#/gal mud on top of cement plug within wellbore.

10. Spot 600' cement plug from 1300'–700' with 110 sacks of Class A cement (Minimum of 100' inside and outside surface casing) 15.6 lb./gallon, yield of 1.18 cu./ft./sack. Wait 12 hours on cement.

OFFICE OF CONSERVATION

11. Go in hole and tag cement. Pressure test plug to a minimum of 350 psi without more than 5% loss in pressure within a 30 min. period.

Upon completion of the application process, the commissioner will set the amount of the required bond or irrevocable letter of credit in accordance with LAC 43: XIX.519.C.14b. The applicant will obtain the required bond or irrevocable letter of credit in that amount set by the commissioner. A draft irrevocable letter of credit and Surety Bond are attached.

DRAFT IRREVOCABLE LETTER OF CREDIT

Dear Sirs:

We hereby establish our Irrevocable Letter of Credit No. _____ in your favor, at the request and for the account of **Brickyard Trucking, LLC** up to the aggregate amount of (amount) available upon presentation by the Commissioner of Conservation, Office of Conservation, Department of Energy and Natural Resources, State of Louisiana on:

1. your sight draft, bearing reference to this letter of Credit No. _____; and

2. your signed statement reading as follows: "I certify that the amount of the draft is payable pursuant to regulation issued in accordance with the requirements of Louisiana R.S.30:1 et seq."

This letter of credit is effective as of _____, *20__*, and must be renewable on October 1, _20_____, and on each successive expiration date, unless at 120 days before the current expiration date, we notify both you and **Brickyard Trucking, LLC**. Documentation that the required closure bond or letter of credit has been renewed must be received by September 15th of each year, unless at least 120 days before the current expiration date, we notify both you and **Brickyard Trucking, LLC** by certified mail that we have decided not to extend this letter of credit beyond the current expiration date. In the event you are so notified, any unused portion of the credit shall be available upon presentation of your sight draft for 120 days after the date of receipt by both you and **Brickyard Trucking, LLC** as shown on the signed return receipts.

This letter is subject to the Uniform Customs and Practice for Documentary Credits (2007 Revision) fixed by the International Chamber of Commerce Brochure No. 600 ("UCP 600").

We hereby agree with you and negotiating banks or bankers that drafts drawn under and in compliance with the terms of this credit shall be duly honored on due presentation to the drawee.

DRAFT SURETY BOND

FROM: BRICKYARD TRUCKING, LLC
AND
SURETY

TO: OFFICE OF CONSERVATION
DEPARTMENT OF ENERGY AND NATURAL RESOURCES
STATE OF LOUISIANA

THIS SURETY BOND is given by Brickyard Trucking, LLC, principal, and [surety name], Surety, to Office of Conservation, Department of Energy and Natural Resources, State of Louisiana, P.O. Box 94275, 70804 - 9275, pursuant to the following terms and conditions:

Principal and surety are bound to creditor in the sum of $[TBD] Dollars, for the payment of which principal and surety jointly and severally bind themselves, their successors, and assigns.

Principal has applied to Creditor to receive a permit or has in effect a permit issued by Creditor to operate a commercial facility, Site Code TBD, for the receipt, storage, treatment and/or disposal of exploration and production waste in BIENVILLE Parish, Louisiana pursuant to the provisions of LSA-R.S. 30:4(I)(10), and LAC43: XIX. Subpart 1. Chapter 5, Sections 513 and 567. Principal is required to provide bonding to ensure the adequate closure of such facility and this bond is issued for said purpose.

This obligation shall run continuously and shall remain in full force and effect until and unless the bond is canceled as provided herein or as otherwise provided by law.

Surety may cancel the bond only by sending notice of cancellation by certified mail to both Principal and Creditor. Cancellation cannot occur or be effective until 120 days after the date of receipt of notice of cancellation by both Principal and Creditor. Further, such notice of cancellation or cancellation shall not affect this surety bond in respect to any obligation which may have arisen prior thereto.

Surety shall become liable on this bond obligation, if and when Principal fails to perform his obligation to adequately close the facility as determined by Creditor after notice and in accordance with administrative procedures.

OFFICE OF CONSERVATION
SEP 13 2024
INJECTION AND MINING DIVISION

Following such determinations, Creditors shall draw on the surety bond by requesting payment by certified mail, and Surety shall pay the amount thereof within 30 days of receipt of said demand. If payment is not made within said 30 days period Surety shall also be liable for legal interest from date of receipt of demand, 10% of principal and interest as attorney's fees and all court cost incurred to collect the obligation.

The amount of the bond liability is as expressed herein, but Principal and Surety take notice of the legal requirements for annual review of the closure bond amounts, which is based upon cost estimates for adequate closure. Following this review Creditor may increase, decrease, or allow the amount to remain the same. Upon notice from Creditor, if an increase is required, Principal shall cause the bond amount to be increased or shall otherwise provide the added security within 60 days after notice.

RE: **Commercial SWD-New Drill**
Brickyard Trucking, LLC (B1119)
Brickyard Trucking SWD Nos. 001, 002 & 003
Jamestown Field (4738) / Bienville Parish, Louisiana

Dear Sir or Madam:

As per the Louisiana Department of Energy and Natural Resources – Injection & Mining Division requirements for PE and PG Certifications for Class II Commercial Saltwater Disposal Wells, the undersigned Registered Professional Engineer has overseen the preparation of the following engineering documents:

1. Attachment 4A – Proposed Wellbore Schematic for the Brickyard Trucking SWD Nos. 001, 002 & 003
2. Attachment 4B – Proposed Work Prognosis for the Brickyard Trucking SWD 001, 002 & 003
3. Attachment 9 – P&A Wellbore Schematic for the Brickyard Trucking SWD Nos. 001, 002 & 003
4. Attachment N 14 – Closure Funding for the Brickyard Trucking, LLC Facility.

I certify to the best of my knowledge that the calculations used within are reasonable and that the documents are accurate.

Sincerely,

Robert B. Raines, III P.E.
Vice-President

Brickyard Trucking, LLC (B1119)
Brickyard Trucking SWD Nos. 001, 002, and 003
Jamestown Field (4738) / Bienville Parish, Louisiana

Dear Sir or Madam:

As per the Louisiana Department of Energy and Natural Resources – Injection & Mining Division requirements for PE and PG Certifications for Class II Commercial Saltwater Disposal Wells, the undersigned Registered Professional Geoscientist has overseen the preparation of the following geological documents:

1. Attachment 7 – Well Log with Underground Source of Drinking Water (USDW),

2. Attachment 7A - Top of Injection Zone (TOZ), Base of Injection Zone (BOZ), and Proposed Perforations marked for the Brickyard Trucking SWD Nos. 001, 002 & 003.

3. Attachment 8 – Geological Cross Sections – A-A' & B-B'.

I certify to the best of my knowledge that the depths used within are reasonable and that the documents are accurate.

Sincerely,

Robert B. Raines, Jr. PG (LA PG 433)
Professional Geoscientist
